Mr. Jack Woodward
Worthington Steel
350 Lawton Ave
Monroe, Ohio 45050

Dear Mr. Woodward:

On August 25, 2010, Ohio EPA conducted a compliance evaluation inspection of the Worthington Steel facility, located at 350 Lawton Avenue, in Monroe, Ohio, to determine Worthington Steel's compliance with Ohio's hazardous waste laws as found in Chapter 3734 of the Ohio Revised Code (ORC) and Chapter 3745 of the Ohio Administrative Code (OAC). Ohio EPA was represented by Cathy Altman and me. You represented Worthington Steel. Our inspection included a facility walk through and review of written documentation.

During the inspection and through our discussion and record review, it was determined that Worthington Steel continues to be an episodic large quantity generator (LQG). A tank cleanout in July triggered LQG status this year. The spent pickling liquid was removed at the time of the cleanout; however, the tank bottom solids remained in drums for later pickup. At the time of the Ohio EPA inspection, Worthington Steel was again operating as a small quantity generator (SQG), however, the drums of waste generated during the cleanout and any other wastes generated in July were subject to all large quantity generator rules. Therefore, for the inspection, Worthington Steel was evaluated against the large quantity generator rules. Worthington Steel is aware of their episodic LQG status and has implemented a hazardous waste management program to meet LQG requirements.

As a result of the inspection, we found violations of Ohio's hazardous waste laws. The violations were either corrected during the inspection or Worthington Steel has worked to address the violations and has submitted evidence that they have been corrected at this time. The violations were as follows:

1. **OAC Rule 3745-279-22(C)(1), Used oil storage requirements for generators:** Containers and aboveground tanks used to store used oil at generator facilities must be labeled or marked clearly with the words "Used Oil."

Worthington Steel uses sorbent pads to mop up used oil spills throughout the facility. The pads are accumulated in 55-gallon drums and then shipped to United Solutions, Inc. where, it is our understanding from you, that they are wrung to recover the used oil, and then the pads are shipped to Aramark for laundering. Since the sorbent rags and pads contain used oil that can be recovered by squeezing or wringing, the sorbents are considered to contain free-flowing used oil and therefore must be handled as used oil and according to used oil management standards.

One of the requirements for used oil generators, OAC 3745-279-22(C)(1), is that containers used to store used oil must be labeled or marked clearly with the words "used oil." During the inspection, the drums being used to accumulate the used oil sorbent pads were observed to be not labeled with the words "Used Oil." **Therefore, Worthington Steel was in violation of OAC 3745-279-22(C)(1).**

- During the inspection, "Used Oil" labels were affixed to the absorbent rag and pad accumulation containers in the Maintenance Shop and were in the process of being affixed to containers throughout the plant. **Worthington Steel is no longer in violation of OAC 3745-279-22(C)(1).**
- 2. **OAC Rule 3745-65-52(C), Content of Contingency Plan:** According to OAC 3745-65-52(A), the contingency plan shall describe the actions facility personnel shall take to comply with OAC 3745-54-51 and OAC 3745-54-56 in response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility.

The contingency plan is to promote routine contact with the area police and fire departments and hospitals. OAC 3745-65-52(C) specifies that the contingency plan must describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and Ohio EPA and local emergency response teams to coordinate emergency services. The facility's contingency plan did not include arrangements with the local emergency responders. **Therefore, Worthington Steel was in violation of OAC 3745-65-52(C).**

- Subsequent to the inspection, Worthington Steel provided a revised contingency plan which includes a section outlining contacts with local agencies and their roles in the event of a release. **Therefore, Worthington Steel is no longer in violation of OAC 3745-65-52(C).**

You said during the inspection that Worthington Steel has a comprehensive environmental management program, one goal of which is continuous improvement in waste reduction.
