**RE: AKRON ANODIZING, OHD 986967933, SUMMIT COUNTY, SQG-CEI, NOTICE OF VIOLATION/ PARTIAL RETURN TO COMPLIANCE**

Dear Mr. Dzurovcin:

On August 31, 2010, Ohio EPA's Division of Hazardous Waste Management, represented by Edward D'Amato and Julia Zhang, inspected Akron Anodizing for compliance with Ohio hazardous waste laws and regulations found in Chapters 3734 of the Ohio Revised Code (ORC) and 3745 of the Ohio Administrative Code (OAC). Akron Anodizing was represented by you.

Akron Anodizing anodizes aluminum parts used in industrial applications.

The following waste streams were identified:

- F019 sludge from wastewater pre-treatment unit
- Various D002 caustic wastes when tanks have to be cleaned out. Tanks go several years between cleaning. They clean the tanks when the parts no longer fit in them.
- A small amount of waste paint material from gun cleaning: D001, D035, F003, F005. It is taken to Falholt for accumulation prior to disposal.
- Compressor oil. Accumulated in a used oil drum in the Falholt facility.
- Universal waste lamps. Accumulated in a box.
- Occasional lead-acid battery from the fork lifts (exchanged at retail store)

The following violations were found:

**1. Universal Waste Management Standards—Containers  
OAC 3745-273-13(D)**

*A small quantity handler of universal waste must contain any lamp in containers or packages that are structurally sound and adequate to prevent breakage...*

There was one lamp that was not in a box per this rule. To correct this violation, you must place the lamp in a box. You must photograph it and send the photograph to this office.

**2. Accumulation Time for Universal Waste  
OAC 3745-273-15**

*A facility must be able to demonstrate the length of time that the universal waste has been accumulated from the date it becomes a waste*

Akron Anodizing was unable to verify the length of time that the universal waste lamps have been accumulating. This violation was corrected during the inspection you determined that the lamps began accumulating on January 15, 2010 and wrote that date on the box. No further action is required regarding this violation.

Ohio EPA offers the following suggestions and information for Akron Anodizing. Akron Anodizing is under no obligation to implement any of the suggestions. Please note that any links to specific companies are provided for informational purposes. Ohio EPA does not recommend or endorse specific products or companies. Akron Anodizing should thoroughly research as many companies as possible. The internet links were also sent to you via e-mail on September 7, 2010:

1. Akron Anodizing uses a short hang time upon removing parts from the sulfuric acid bath. This results in a lot of drag out of the anodizing solution to other tanks. You explained that the short hang time is necessary because the heat from the bath causes streaking on the parts. There may be options to reduce the streaking that would permit increased hang time. Alternative bath chemistries, air-water misting, or the use of an air knife are possibilities. If you are interested Ron Smith with Ohio EPA's Office of Pollution Prevention (OCAPP) can discuss these potential options in more detail. He can be reached at (614) 644-2813.
2. Akron Anodizing operates a boiler to provide heat to the sulfuric acid tank. The lines between the boiler and the tank are not insulated. Insulating the lines may be an inexpensive and easy way to reduce the energy use of the boiler.
3. The boiler appears to be old. Akron Anodizing may want to evaluate the energy efficiency of the boiler compared to newer models to determine if there is a financial justification to replace it. In addition, the tank in which the water is heated appears to be un-insulated. Akron Anodizing may want to evaluate whether insulating the tank is feasible.
4. The anodizing process requires that the sulfuric acid tank be heated; however, the tank is un-insulated. Akron Anodizing may want to consider insulating the tank.
5. Akron Anodizing uses T-12 fluorescent lamps throughout the facility. Upgrading to more energy efficient T-8 or other lighting fixtures often provides a worthwhile payback. Below are two links to case studies of re-lamping projects in industrial settings:

Daylighting may also be an option to consider. Studies have shown that, in addition to energy savings, daylighting can increase employee productivity:

Ed D'Amato/DHWM-NEDO and Julia Zhang/DHWM-CO conducted a hazardous waste compliance evaluation inspection at Akron Anodizing. The following is a summary of the inspection and the information obtained.

- Inspectors arrived at approximately 9:30AM.
- Akron Anodizing was represented by Dan Dzurovcin/Vice President, and Jerry A. Gray/Vice President of sister company Falholt. Both Falholt and Akron Anodizing are divisions of Russell Products. Falholt is located adjacent to Akron Anodizing.
- Akron Anodizing anodizes aluminum parts using either a standard anodizing or hard anodizing process. The company also operates a steel phosphating line that is rarely used (it's less than 5% of their business).
- The steps of the standard anodizing process is as follows:
  - \* Parts are racked then are dipped in tanks in the following order:
  - \* Soak cleaner
  - \* Sodium Hydroxide etch
  - \* Rinse
  - \* Nitric Acid (de-smut)
  - \* Sulfuric acid solution with electric current. This step can include adding black, red, or gold dye, per customer requests.
  - \* Final rinse
- The hard anodizing process goes through the same steps, but the sulfuric acid bath will be set at a lower temperature and the electric current would be increased.
- The phosphating process is as follows:
  - \* Cleaner
  - \* Sandblast (not done routinely, if customer requests it or parts require it)
  - \* Phosphate dip (chemical conversion coating)
  - \* Rinse
  - \* parts oiled
- Company can re-configure the baths to do chromate conversion coating instead of anodizing.

- Company has a paint booth that is used rarely. The Akron Air has determined it is a *de minimis* source.
- Facility operates a wastewater pre-treatment system to treat waste water from the anodizing and phosphating lines. The system has 3 stages:
  - \* 1<sup>st</sup> Stage: Mix, raise pH
  - \* 2<sup>nd</sup> Stage: Flocculent
  - \* 3<sup>rd</sup> Stage: Clarification/settling.
  - \* After the 3<sup>rd</sup> stage, settled sludge goes through filter press.
- The following waste streams were identified:
  - \* F019 sludge from wastewater pre-treatment unit
  - \* Various D002 caustic wastes when tanks have to be cleaned out. tanks go several years between cleaning. They clean the tanks when the parts no longer fit in them.
  - \* Waste paint material from gun cleaning: D001, D035, F003, F005. Small amount generated. It is taken to Falholt for accumulation prior to disposal.
  - \* Compressor oil. Accumulated in a used oil drum in the Falholt facility.
  - \* Universal waste lamps. Accumulated in a box.
  - \* Occasional lead-acid battery from the fork lifts. Fork lifts are normally serviced by Equipment Sales & Service (Medina). They take the oil from oil changes and the batteries. However, if they need a new battery before the service company can take care of it, they will change the battery themselves and exchange the old on it at the store.
- Chemtron picks up all wastes.
- Chemtron also provided hazardous waste management training at the facility in 2009.
- Walkthrough included a all processes and all areas of Akron Anodizing's portion of the building. Used oil drum in Falholt was also inspected.
- There was one box of used fluorescent lamps. The box was closed and labeled. One used lamp was not in a container, and the company was unable to demonstrate how long the lamps had been accumulating. Facility representatives determined that the last shipment of lamps occurred in mid-January. They wrote an accumulation start date on the container during the inspection.

Inspectors may call BUSTR at 614-752-7938 or a BUSTR site coordinator to report an unregistered UST or a UST that appears to not be in compliance with BUSTR regulations. A list of BUSTR coordinators by county are at: [https://www.comapps.ohio.gov/sfm/fire\\_apps/bust/bustr/SearchByCounty.asp](https://www.comapps.ohio.gov/sfm/fire_apps/bust/bustr/SearchByCounty.asp).
