**RE: ESCO TURBINE TECHNOLOGIES
EPA ID NO.: OHD 098 912 934
LAKE COUNTY
NOTICE OF VIOLATION (NOV)
LQG**

John Carnes, Site Manager
ESCO Turbine Technologies
34000 Lakeland Boulevard
Eastlake, Ohio 44095

Dear Mr. Carnes:

On March 17, 2011, Sherry Slone and I, as representatives of the Ohio EPA Division of Hazardous Waste Management, conducted an inspection of ESCO Turbine Technologies (ESCO Turbine) located at 34000 Lakeland Boulevard, Eastlake, for compliance with Ohio's hazardous waste and used oil laws and regulations. You, Eric Lecy, Maintenance Manager, and Michelle Bingham, Environmental, Health, and Safety Engineer, represented ESCO Turbine during the inspection.

ESCO Turbine operates a foundry using the investment casting process, a type of lost-wax casting. Products are primarily used in industrial gas turbines and the aerospace industry, for example, jet engine turbine blades and vanes.

Hazardous wastes generated by the facility include the following:

- Spent caustic solution (Sodium and potassium hydroxides) from the core leaching process (D002); and,
- Used dye penetrant (D009, D040) and used Q-Tips (D040) contaminated with trichloroethylene.

A spent hydrochloric acid solution is generated which is recycled through Agmet for its acidic properties and so is not regulated as a waste.

The inspection included a review of the facility's operations, as well as waste management practices and documentation. ESCO Turbine was inspected for the requirements of a large quantity generator (LQG) of hazardous waste because the facility generates more than 2,200 pounds of hazardous waste in a calendar month. Spent caustic is the largest volume hazardous waste stream.

This letter will explain the violations I found and steps you need to take to correct them. I found the following violations of Ohio's hazardous waste, used oil and universal waste laws and regulations:

1. **OAC Rule 3745-270-07(A)(2) Land Disposal Ban Notice**
OAC Rule 3745-270-07(A)(8) Land Disposal Ban Notice Recordkeeping

These rules require the generator to send a one-time written notice to each treatment or storage facility receiving a hazardous waste that does not meet the land disposal treatment standards, to place a copy in the generator's files and retain the copy for three years after the hazardous waste was last shipped. The written notice must be sent with the initial shipment to a treatment or storage facility.

The facility did not provide any copies of the land disposal ban notices that it had submitted to waste treatment or storage facilities, except for a spent parts washer solvent going to Safety Kleen.

A land disposal restriction (LDR) Notification Form dated 4-27-2010 for spent mineral spirits parts washer solvent was provided, but it had some obvious discrepancies that need to be resolved. The spent solvent is profiled on the LDR Notification Form dated 4-27-2010 as carrying a waste code of D039 (tetrachloroethylene) and seven constituents subject to the LDR rules are listed. However, the facility reported that tetrachloroethylene is not used and that it is now shipping spent parts washer solvent as a non-hazardous waste based on Safety Kleen analysis.

To return to compliance the facility must:

- Obtain copies of land disposal ban notices from its files or from the treatment or storage facilities to which it has shipped hazardous waste for the past three years;
- Or if some were never submitted, create and submit them to the treatment or storage facilities;
- Resolve the inconsistency between the LDR Notification Form dated 4-27-2010 for spent parts washer solvent and the current practice of managing as a non-hazardous waste; and
- Submit copies of the above land disposal ban notices to this office and documentation of the correct waste status (i.e., hazardous or non-hazardous) and appropriate LDR notification form for spent parts washer solvent within 30 days of receipt of this letter.

2. **OAC Rule 3745- 66-74 Weekly Inspections of Hazardous Waste Containers**

A large quantity generator of hazardous waste is required to inspect all containers of hazardous waste in the 90 day accumulation area at least weekly

and to record the inspections in a log or summary. Inspection logs used at ESCO Turbine only allow entries for four weeks per month. The facility did not provide documentation that inspections were recorded for the two or three weeks per year not included in 12 monthly forms. In addition, no inspections recorded for weeks three and four of October 2008.

To return to compliance the facility must:

- Revise the inspection forms for the 90 day accumulation area to allow for documentation of inspection for each week of the year; and
- Submit copies of the revised inspection forms completed for two weeks to this office within 30 days of receipt of this letter.

3. **OAC Rule 3745-65-16 (C) Personnel Must Take Part In An Annual Review Of The Initial Training**

This regulation requires that all facility personnel with hazardous waste management responsibilities receive annual refresher training as part of the facility's hazardous waste management personnel training program.

ESCO Turbine was not able to document that all persons with hazardous waste management responsibilities received refresher training in 2010 as required by OAC Rule 3745-65-16 (C).

To return to compliance the facility must:

- Immediately provide annual hazardous waste refresher training for: individuals responsible for signing hazardous waste manifests, individuals responsible for transferring waste to the satellite accumulation containers; and, any other individuals identified by the facility as having hazardous waste management responsibilities.
- Provide documentation of these actions, including a list of attendees and a syllabus of the training course, to this office within 30 days of receipt of this letter.

4. **OAC Rules 3745-65-53(B) A Copy Of The Contingency Plan Shall Be Submitted To Local Authorities**

This regulation requires an LQG to submit copies of its contingency plan, including revisions to the plan, to the local fire department, police or law enforcement department, and hospital identified in the plan as anticipated emergency responders. While the facility had updated its contingency plan, it did

ESCO Turbine Technologies

Page 4

not provide documentation that these anticipated emergency responders have received plan revisions.

To return to compliance the facility must:

- Distribute copies of the revised contingency plan to the local fire department, police or law enforcement department, and hospital as required in OAC Rule 3745-65-53(B).
- Provide documentation (e.g., the return receipt from certified mail) to this office within 30 days of receipt of this letter that the preceding actions have been completed.

Submit the above requested response documentation to this office within 30 days of receipt of this letter. Response correspondence should be sent to:

CONCERNS

Weekly Container Inspections

One of the questions that we discussed during on-site inspections is whether weekly inspections must be completed if the facility is not operating. By rule (OAC 3745-66-74), generators must inspect their hazardous waste 90 day accumulation area containers weekly and record the container storage area inspections in a log or summary even if the plant is undergoing a shutdown period. There is an exception if no containers of hazardous waste are in the 90 day accumulation area, in which case the weekly container inspection rule would not apply. Lack of waste in the 90 day accumulation area should be noted on the inspection form as an indication of why inspection was not completed.

Generator Closure

My understanding is that since the previous compliance inspection in 2006, ESCO Turbine has ceased using one of its 90 day accumulation areas. During the inspection we discussed whether the facility had completed closure of the prior 90 day accumulation area. As the rules do not include a deadline by which generator closures

Page 5

of 90 day accumulation areas must be completed, the fact that the facility had not yet completed closure is not a rule violation. However, it is usually to a generator's advantage to complete closure as soon as practicable after ceasing usage of a 90 day accumulation area. Please see the attached guidance; contact me if you wish to discuss.
