Hazardous Waste
Notice of Violation

September 23, 2009

Mr. Brian Callan, President
Defiance Stamping Company
P.O. Box 506
Defiance, Ohio 43512

Dear Mr. Callan:

Thank you for accompanying me during Ohio EPA's September 16, 2009, compliance evaluation inspection of Defiance Stamping Company (DSC) located at 1090 Perry Street in Defiance, Ohio. I inspected DSC to determine its compliance with Ohio's hazardous waste laws as found in Chapter 3734. of the Ohio Revised Code (ORC) and Chapter 3745. of the Ohio Administrative Code (OAC). My inspection included observations of facility operations and a review of written documentation.

DSC is a metal stamping and machining shop that manufactures parts for the auto, heavy truck and agricultural industries. Most of the machining involves threading various parts. The general processes involved include: cutting, bending, stamping, machining, product finishing and shipping. According to you, 99% of the metal that is used at DSC is low carbon steel. Very small amounts of Stainless Steel and aluminum may be used at times.

DSC does not generate hazardous waste. DSC uses lubricants for stamping and machining parts but rarely generates used oil. Instead, it recycles and re-uses its lubricants. In the stamping presses, the lubricant is sprayed onto the metal as it is stamped. The oil is drained to a pit under the press. Additives keep the oil from fouling. It is filtered and pumped back to the press. In the machining areas, the lubricants are recycled in a similar manner. Machining turnings are spun to remove oil and the oil is recycled. Scrap metal is sent to Omni Source for recycling. The following non-hazardous wastes are generated:

1. Universal Waste Lamps: DSC occasionally accumulates spent lamps that are recycled through Cousins Waste Control.

Mr. Brian Callan, President

Page 2

2. Used Oil: Occasionally, the press pits must be pumped out. This has been done by Cousins Waste Control.

As a result of my inspection, I found the following violations of Ohio's hazardous waste laws. In order to correct these violations, you must do the following and send me the required information, **within 30 days** of your receipt of this letter:

1. **Universal Waste Packaging - Lamps**
OAC Rule 3745-273-13(D)(1)

A small quantity handler of universal waste must contain any lamp in containers or packages that are structurally sound, adequate to prevent breakage, and compatible with the contents of the lamps. Such containers and packages must remain closed and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

DSC did not place all its spent lamps in closed containers. I observed as many as two dozen fluorescent lamps that were not placed into proper, closed containers. In order to correct this violation, DSC must immediately place each spent lamp into a closed container and provide me with photographic documentation that this has been done.

2. **Universal Waste Labeling - Lamps**
OAC Rule 3745-273-14(E)

Each lamp or a container or package in which such lamps are contained must be labeled or marked clearly with one of the following phrases: "Universal Waste Lamps", "Waste Lamps" or "Used Lamps".

DSC did not properly label containers for approximately two dozen spent fluorescent lamps and two dozen spent metal halide lamps with one of the required phrases. In order to correct this violation, DSC must immediately mark or label the boxes with one of the required phrases and provide me with photographic documentation that this has been done.

3. **Accumulation Time for Universal Waste Lamps**
OAC Rule 3745-273-15(C)

A small quantity handler of universal waste who accumulates universal waste shall be able to demonstrate the length of time that the universal waste has been accumulated from the date it becomes a waste or is received.

Mr. Brian Callan, President
September 23, 2009
Page 3

DSC was not able to demonstrate the length of time the universal waste lamps were accumulated. In order to correct this violation, DSC must immediately date each of the boxes and provide me with photographic documentation that this has been done.

Please be aware that incandescent, fluorescent, metal halide, neon, high-intensity discharge, high-pressure sodium and mercury-vapor lamps could be hazardous waste when discarded. Fluorescent lamps may contain up to 40 milligrams (mg) of mercury, depending on the brand and manufacturer. Lamps may also contain lead and cadmium. Many lamps exhibit a characteristic of toxicity for heavy metals when disposed. I have enclosed copies of the following documents, to assist you in properly managing your spent lamps: Fluorescent Lamps: What You Should Know and Computer, Fluorescent Lamp and Ballast Recyclers. I recommend that you review these documents carefully and contact me if you have any questions. The first document describes the rules you must follow in order to manage lamps as a universal waste.

As a used oil generator you are required to store used oil in containers or aboveground tanks that are in good condition (no severe rusting, apparent structural defects or deterioration) and not leaking. Containers, aboveground tanks and fill pipes for underground tanks must be labeled with the words "Used Oil." If leaks are detected, the generator must: stop the release; contain the release; clean up and manage properly the released used oil and other materials related to the release; and, if necessary, repair or replace any leaking containers or tanks prior to returning them to service. I have enclosed copies of the following used oil fact sheets: The Regulation of Used Oil: An Overview for Ohio Businesses Who Generate Used Oil, and Used Oil Recyclers. Please review these carefully and contact me immediately if you have any questions.

You may be able to further reduce the waste your company generates. If you find ways to recycle, reduce or altogether eliminate the amount of waste that your company generates you may be able to reduce your treatment and disposal costs and you may possibly reduce your regulatory requirements. I have enclosed a copy of Pollution Prevention Opportunities, a worksheet that can help you recognize opportunities for reducing waste and conserving energy at your business. I have also enclosed a copy of the fact sheet Management of Electronic Waste from Businesses. Please review this information and contact me if you have any questions.

I encourage you to schedule a pollution prevention assessment for your business because there are often many opportunities for businesses like yours to reduce waste and save money.
