Hazardous Waste
Notice of Violation

December 22, 2010

Mr. Gary Warnecke, Shop Manager
Cassens Transport Company
633 Matzinger Road
Toledo, Ohio 43612

Dear Mr. Warnecke:

Thank you for accompanying me during Ohio EPA's December 15, 2010, compliance evaluation inspection of Cassens Transport Company (CTC) located at 633 Matzinger Road in Toledo, Ohio. I inspected CTC to determine its compliance with Ohio's hazardous waste laws as found in Chapter 3734. of the Ohio Revised Code (ORC) and Chapter 3745. of the Ohio Administrative Code (OAC). My inspection included observations of facility operations and a review of written documentation.

CTC ships new vehicles to Chrysler and Ford dealers in the Midwest. It maintains its fleet of trucks and performs welding, oil changes (crankcase and hydraulic), winterization and other services for the trucks.

CTC was not generating hazardous waste at the time of my inspection. CTC generates the following non-hazardous wastes:

1. Used Oil: Engine and hydraulic oil is accumulated in the maintenance pit and pumped to a sump inside the shop. From the sump it is pumped to an outdoor, underground tank. Approximately 150 gallons of used oil is accumulated each month. It is pumped from the tank to a 500,000 BTU per hour used oil-fired space heater in the shop. The heater is vented to the atmosphere. Since CTC uses the space heater, it does not need to ship used oil off-site.
2. Spent Parts Washer Solvent: CTC operates one 35-gallon parts washer for cleaning truck parts with mineral spirits. The solvent is changed every two months. The parts washer is part of Heritage Crystal Clean's Continued Use program. Therefore, the spent solvent is not a waste. Chuck Sizemore of Heritage Crystal Clean explained this program to Greg Foster and me by phone.
3. Spent Antifreeze: Antifreeze is usually generated in the cold weather months, when trucks are winterized. CTC recycles spent antifreeze through Heritage Crystal Clean.

Mr. Gary Warnecke

4. Universal Waste Lamps: CTC accumulates four-foot fluorescent lamps and recycles them through Mr. LightBulb of Toledo, Ohio.
5. Spent Batteries: Spent lead-acid batteries from vehicles are recycled through Ohio Automotive in Findlay, Ohio.

As a result of my inspection, I found the following violations of Ohio's hazardous waste laws. In order to correct these violations, you must do the following and send me the required information, **within 30 days** of your receipt of this letter:

**1. Used Oil Container Labeling
OAC Rule 3745-279-22(C)(1)**

Containers, aboveground tanks, and fill pipes for underground tanks used to store used oil at generator facilities must be labeled or marked clearly with the words "Used Oil." On December 15, 2010, I observed two used oil sumps inside the shop and the lid to the outside, underground used oil tank that were not labeled with the words "Used Oil".

In order to correct this violation, CTC must immediately mark or label the used oil sumps and the lid to the used oil tank with the words "Used Oil" and provide me with photographic documentation that this has been done.

**2. Universal Waste Labeling - Lamps
OAC Rule 3745-273-14(E)**

Each lamp or a container or package in which such lamps are contained must be labeled or marked clearly with one of the following phrases: "Universal Waste Lamps", "Waste Lamps" or "Used Lamps".

CTC did not properly label its box of spent lamps with one of the required phrases. In order to correct this violation, CTC must properly label each spent lamp container and submit photographic documentation that this has been done.

**3. Accumulation Time for Universal Waste - Lamps
OAC Rule 3745-273-15(C)**

A small quantity handler of universal waste who accumulates universal waste shall be able to demonstrate the length of time that the universal waste has been accumulated from the date it becomes a waste or is received.

CTC was not able to demonstrate the length of time the universal waste lamps were accumulated. In order to correct this violation, CTC must place a date on each container, once a universal waste lamp is placed into it, and submit photographic documentation that this has been done.

Please be aware that incandescent, fluorescent, metal halide, neon, high-intensity discharge, high-pressure sodium and mercury-vapor lamps could be hazardous waste when discarded. Fluorescent lamps may contain up to 40 milligrams (mg) of mercury, depending on the brand and manufacturer. Lamps may also contain lead and cadmium. Many lamps exhibit a characteristic of toxicity for heavy metals when disposed. I have enclosed copies of the following documents to assist you in properly managing your spent lamps: Fluorescent Lamps: What You Should Know and Computer, Fluorescent Lamp and Ballast Recyclers. I recommend that you review these documents carefully and contact me if you have any questions. The first document describes the rules you must follow in order to manage lamps as a universal waste.

As a used oil generator you are required to store used oil in containers or aboveground tanks that are in good condition (no severe rusting, apparent structural defects or deterioration) and not leaking. Containers, aboveground tanks and fill pipes for underground tanks must be labeled with the words "Used Oil." If leaks are detected, the generator must stop the release; contain the release; clean up and manage properly the released used oil and other materials related to the release; and, if necessary, repair or replace any leaking containers or tanks prior to returning them to service. I have enclosed copies of the following used oil fact sheets: The Regulation of Used Oil: An Overview for Ohio Businesses Who Generate Used Oil, and Used Oil Recyclers. Please review these carefully and contact me immediately if you have any questions.

You may be able to further reduce the waste your company generates. If you find ways to recycle, reduce or altogether eliminate the amount of waste that your company generates you may be able to reduce your treatment and disposal costs and you may possibly reduce your regulatory requirements. I have enclosed copies of Pollution Prevention Opportunities, a worksheet that can help you recognize opportunities for reducing waste and conserving energy at your business, and the fact sheets Management of Electronic Waste from Businesses and Battery Recyclers/Brokers & Disposal Facilities. Please review this information and contact me if you have any questions.

I encourage you to schedule a pollution prevention assessment for your business because there are often many opportunities for businesses like yours to reduce waste and save money. If you wish to talk about an assessment or if you have other questions about pollution prevention, please feel free to contact Ron Nabors at 419-373-3147 or the Office of Compliance Assistance and Pollution Prevention (OCAPP) at (614) 644-3469. There is no charge for an assessment.
