Re: Lucas County
Al's Polishing & Plating Shop
Industrial
Storm Water

October 3, 2011

Mr. Al Szymanowski
Al's Polishing & Plating Shop
1615 West Laskey Road
Toledo, Ohio 43612

Dear Mr. Szymanowski:

On September 8, 2011, I inspected the Al's Polishing & Plating Shop, located at 1615 West Laskey Road, Toledo (photos taken). The purpose of my visit was to evaluate compliance of the site with the National Pollutant Discharge Elimination System (NPDES) permit for storm water discharges associated with industrial activity, Facility ID No. 2GR00265. You were present to provide information. As a result of the inspection, I have the following comments:

1. The facility does custom and production plating and metal polishing. It appears to have Standard Industrial Classification (SIC) codes of 3479, Metal Coating and Allied Services, and 3471, Plating and Polishing. It obtained permit coverage in 2006. While the current version of the permit has expired, your coverage remains in effect until Ohio EPA issues a new general permit. Ohio EPA is currently in the process of renewing the general permit, called the Multi-Sector General Permit (MSGP). The draft permit may be viewed at: http://www.epa.ohio.gov/dsw/permits/IndustrialStormWater_draft_GP_oct10.a.spx.

Once the general permit is renewed, Ohio EPA will send an application packet to all permittees instructing them on how to renew coverage. You will have 90 days from receipt of these instructions to renew permit coverage. At this time, I **recommend reviewing the MSGP**. Sections 1 through 8 pertain to all facilities. Subpart AA outlines specific Best Management Practices (BMPs) required for your industrial sector.

Please be aware that the draft Multi-Sector General Permit will require at least quarterly routine documented inspections of all areas of the facility where industrial activities or materials are exposed to storm water and of all storm water control measures used to comply with this permit.

Mr. Al Szymanowski
October 3, 2011
Page 2

The draft Multi-Sector General Permit will also require at least annual employee training of all employees who work in areas where industrial activities or materials are exposed to storm water, or who are responsible for implementing activities necessary to meet the conditions of this permit (e.g. inspectors, maintenance personnel).

2. Industrial activities with potential exposure of pollutants to storm water include: outside storage of wood pallets, liquid containers (some had evidence that material had spilled or dripped over the sides); material loading and unloading activities at loading bay/truck docks. Various types of debris were scattered south of the north building around a trailer.
3. I did not observe any discharge entering the catch basins from runoff. The catch basin by Laskey Road did not appear to have any flow passing through it. Facility sampling is not required and has not been performed. However, routine monitoring will be required under the MSGP. The Agency is currently revising the frequency of monitoring in the draft permit. Once the permit is issued final, guidance on MSGP monitoring can be found at:
http://www.epa.gov/npdes/pubs/msgp_monitoring_guide.pdf.
4. A Storm Water Pollution Prevention Plan (SWP3) was not available. *Failure to develop and implement a SWP3 is a violation of Part VI of the permit.* An SWP3 must be developed. Details on the required contents of a SWP3 can be found in the current permit. A template for developing a SWP3, a sample record keeping form, and a sample Annual Report form for the proposed MSGP can be found at:
http://www.epa.ohio.gov/dsw/permits/IndustrialStormWater_draft_GP_oct10.a.spx.

The NPDES permit requires that the SWP3 describe and insure implementation of storm water controls. These controls must address several different components of facility operations that are listed in the permit. Storm water control implementation issues were noted for the following facility operations:

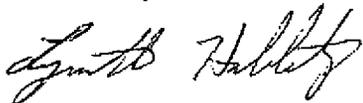

5. Good Housekeeping - This item requires BMPs that result in the maintenance of a clean, orderly facility. Various types of equipment and debris were scattered south of the north building, around a trailer and on the ground. *This is a violation of Part IV. D.3.a. of the permit.* This area needs to be tidied up and any solid waste properly disposed.

Mr. Al Szymanowski

Page 3

6. Inspections – The SWP3 shall identify qualified personnel to inspect designated equipment and areas and specify inspection frequency. Inspections shall be documented and records shall be maintained. Tracking or follow-up procedures shall be used. The permit requires that an annual Comprehensive Site Compliance Evaluation be conducted. Al's Polishing & Plating Shop does not currently have a documented inspection procedure for storm water controls. *Failure to routinely inspect and document findings is a violation of Parts IV.D.3.d and IV.D.4. of the permit.*
7. Non-Storm Water Discharges - The permit requires the SWP3 to contain a certification that Al's Polishing & Plating Shop's storm water discharge has been tested or evaluated for the presence for non-storm water discharges. A description of the results of any test or evaluation, the evaluation criteria or testing method used, the date of the assessment and the onsite drainage points that were observed must be included in the SWP3. *Failure to perform an evaluation and document the result is a violation of Part IV.D.3. g. of the permit.*

Within 30 days of the date on this letter, please submit to this office **written notification** as to the actions taken or proposed to address the compliance issues. Your response should include the dates, either actual or proposed, for the completion of the actions. If there are any questions, please contact me at (419) 373-3009.

Sincerely,

Lynette M. Hablitzel, P.E.
