Mr. David Deem, Plant Manager
UTI Integrated Logistics—Little Hocking Service Center
251 Arrowhead Road
Little Hocking, Ohio 45742

Dear Mr. Deem:

On March 9, 2011, Ohio EPA inspected UTI Integrated Logistics' Little Hocking Service Center "LHSC" of Little Hocking, Ohio to determine LHSC's compliance with Ohio's hazardous waste laws as found in Chapter 3734. of the Ohio Revised Code (ORC) and Chapter 3745. of the Ohio Administrative Code (OAC). LHSC was represented by you. This letter will explain the violations I found, what you need to do to correct the violations, other general concerns we have, what you need to do to respond to my general concerns and any pollution prevention opportunities I identified.

I found the following violations of Ohio's hazardous waste laws. In order to correct these violations, you must do the following and send me the required information **within 30 days** of the date of this letter:

- (1) OAC Rule 3745-273-14(A)and(E), Labeling/marking- Standards for Small Quantity Handlers of Universal Waste:** A small quantity handler of universal waste must label or mark the universal waste to identify the type. Each lamp or a container or package in which lamps are contained must be labeled with one of the following phrases: "Universal Waste Lamps" or "Waste Lamps" or "Used Lamps". Batteries or containers in which batteries are stored must be marked with one of the following phrases: "Universal Waste Batteries" or "Waste Batteries" or "Used Batteries". LHSC failed to label a container holding used lamps and a container holding used batteries.

During the inspection, LHSC representatives properly labeled the containers, thus this violation has now been abated.

GENERAL COMMENTS

- (a) Spent aerosol can waste may be minimized by using refillable aerosols for products that are used regularly and in significant volumes. During the inspection, I noted that there seemed to be several aerosol products that LHSC regularly uses. The following information may be helpful to LHSC:

<http://www.sp2.org/newsletters/vol4/iss3/Minimizing%20AW.pdf>

- (b) LHSC uses a solvent based parts washer in its maintenance shop for cleaning of small parts. LHSC may wish to consider a hot water parts washer. Several ODOT facilities have switched to hot water parts washers with excellent results, reducing safety hazards, liability and waste disposal costs. The following link will provide information on this option, including a case study:

<http://www.epa.ohio.gov/LinkClick.aspx?fileticket=YT2oDL6mrTM%3d&tabid=2219>

- (c) LHSC currently sends TCE-contaminated rags offsite for disposal. In Ohio, solvent-contaminated rags and wipers contaminated with a solvent constituent that appears in the listing descriptions for hazardous wastes F001 to F005 are not classified as listed hazardous waste, except in situations where the rag or wiper is used to clean up a spill of listed hazardous waste solvent. Even though Ohio EPA no longer considers solvent-contaminated rags and wipers as listed hazardous waste, if you generate solvent-contaminated rags or wipers and do not have them laundered, you will still need to evaluate this waste stream to determine whether, for purposes of storage, transportation and disposal, they would be a characteristic hazardous waste. Please note that laundered rags are not regulated, provided they do not contain free liquids and are sent to a commercial laundry subject to regulation under the Clean Water Act or a dry cleaner for cleaning and reuse. LHSC may wish to minimize the volume of hazardous waste they send offsite by using an industrial launderer for its rags. Enclosed is a list of industrial launderers in Ohio.

Enclosed, you will find a copy of the checklists that were completed during the inspection. Should you have any questions, please feel free to call me at (740) 380-5293. You can find copies of the rules and other information on the division's web page at <http://www.epa.state.oh.us/dhwm>.

Sincerely,

Donna Goodman
District Representative
Division of Hazardous Waste Management

REMARKS & GENERAL INFORMATION

General Process Information:

The Little Hocking Service Center (LHSC) is currently owned by DuPont but operated by the LTI Integrated Logistics, who acquired it from the former operator, "Standard Corporation", in 2002. Previous former plant operators have included Contracted Operations and in the early 1990's, Plastic Masters. DuPont, the plant owner, is located across the Ohio River at the large Washington Works chemical plant in Washington, WV. LHSC manufactures compounded plastic resins in pellet form. Pellets are shipped offsite for use as raw materials by other industries to manufacture items such as CV joint boots for the automotive industry. LHSC's process has not changed considerably since the early 1990's includes four extrusion lines. Off-spec plastic pellets and other plastic wastes are recycled offsite by being sold as seconds. Occasionally titanium dioxide and antioxidant powders used in the plastic making process exceed their shelf lives and are disposed of as a solid waste. LHSC has a maintenance shop where parts washing occurs, and a laboratory where wastes from QAQC testing of the resins are generated.

Regulatory/Enforcement History (if applicable):

LHSC was a CESQG at the time of the 2011 inspection but occasionally could be an episodic SQG, depending on the volume of business they are experiencing. They are also a small quantity handler of universal waste lamps and batteries. The company was last inspected on 10/13/98 when they were operated by Contracted Operations. No violations were found. A previous inspection in 1991 when the company was operated by Plastic Masters revealed that the company was storing acetone for greater than 180 days. Violations were cited and the company conducted a closure of the outdoor pad where storage occurred per a closure plan that was approved by OEPA on 9/18/92. The closure was certified as completed by Ohio EPA on May 21, 1993 but the company remains subject to any corrective action responsibilities that may be required.
