Mr. Eric Kerns
Environmental, Health & Safety Manager
RJF International Corporation
P.O. Box 657
Oak Grove
Marietta, OH 45750

Dear Mr. Kerns:

On August 14 and 18, 2009, Ohio EPA conducted a compliance evaluation inspection at RJF International Corporation located at 700 BF Goodrich Road in Oak Grove to determine compliance with Ohio's hazardous waste laws and regulations as found in the Ohio Revised Code (ORC) and the Ohio Administrative Code (OAC). During the inspection, we helped RJF identify ways to prevent pollution by reducing waste. This letter will explain the violations we found, what you need to do to correct the violations, and other general concerns we have.

We found the following violations of Ohio's hazardous waste laws. In order to correct these violations, you must do the following and send me the required information **within 30 days** of your receipt of this letter:

(1) OAC Rule 3745-52-34(D)(5)(b), Accumulation Time of Hazardous Waste:

The generator must post the following information next to the telephone:

- (i) The name and telephone number of the emergency coordinator;
- (ii) Location of fire extinguishers and spill control material, and, if present, fire alarm(s); and
- (iii) The telephone number of the fire department, unless the facility has a direct alarm.

RJF failed to have the required information posted next to the telephone, in violation of this rule. RJF shall post the information and submit photographs, revealing this rule is being met.

(2) OAC Rule 3745-279-22(C)(1), Used Oil Storage Requirements for Generators:

Containers and aboveground tanks used to store used oil at generator facilities must be labeled or marked clearly with the words "used oil."

Several 55-gallon drums in the used oil storage area, and pans underneath mill equipment were not labeled "used oil", in violation of this rule. RJF shall label all drums and pans and submit photographs, revealing that this rule is being met.

(3) OAC Rule 3745-273-13(D)(1), Waste Management - Standards for Small Quantity Handlers of Universal Waste:

A small quantity handler of universal waste must contain any lamp in containers or packages that are structurally sound, adequate to prevent breakage, and compatible with the contents of the lamps. Such containers and packages must remain closed and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

Spent fluorescent bulbs were on a shelf, not contained in a box or other suitable container, and one box of fluorescent bulbs was not closed, in violation of this rule. You boxed up the spent bulbs during the inspection, and closed the open box, to return to compliance with this rule. No further action is necessary.

GENERAL COMMENTS

- (a) For your information, I have enclosed a fact sheet regarding fluorescent bulbs. As we discussed, fluorescent bulbs are a universal waste and must be managed under the universal waste rules in OAC 3745-273.
- (b) Based on a review of RJF's hazardous waste manifests, RJF is normally a small quantity generator (SQG), however, there were months in 2007 and 2008 when RJF was a large quantity generator (LQG). As we discussed, if RJF becomes a LQG for any calendar month during the year, additional requirements apply such as annual reporting, contingency plan, and annual personnel training. RJF should closely monitor their monthly waste generation amounts so that you know which generator category RJF falls under and which regulations apply to the facility.
- (c) During the inspection, we reviewed RJF's contingency plan for compliance with OAC 3745-65-52 when RJF is a large quantity generator. One deficiency we noted was that RJF's emergency coordinator information lacked addresses and telephone numbers (home and office). Also, the emergency coordinators must be named as the primary emergency coordinator and the others listed in the order in which they will assume responsibility as alternates.

- (d) Ohio EPA sent letters to RJF on September 25, 2008, and April 27, 2009 regarding RCRA corrective action at the RJF Oak Grove facility. To date, we have not received a response to these letters.

As discussed during the inspection, you may be able to reduce the waste your company generates. If you find ways to recycle, reduce, or altogether eliminate the amount of waste that your company generates, you may be able to reduce treatment and disposal costs, and you may possibly reduce your regulatory requirements. The Ohio EPA strongly encourages pollution prevention as the preferred approach for waste management. The first priority of pollution prevention is to eliminate the generation of wastes and pollutants at the source (source reduction). For wastes or pollutants that are generated, the second priority is to recycle or reuse them in an environmentally sound manner. You may benefit economically, help preserve the environment, and improve your public image by implementing pollution prevention programs. You can find more information about pollution prevention, including fact sheets, at the following web address: http://www.epa.state.oh.us/ocapp_recycle.html. If you would like to be considered for an in-depth on-site pollution prevention assessment, or if you would like more information about pollution prevention assessments, please contact me.

Enclosed, you will find a copy of the checklists that were completed during the inspection. Should you have any questions, please feel free to contact me at (740) 380-5288. You can find copies of the rules and other information on the division's web page at <http://www.epa.state.oh.us/dhwm>.

Sincerely,

Scott N. Bergreen

Ohio EPA's failure to list specific deficiencies or violations in this letter does not relieve your company from having to comply with all applicable regulations.

REMARKS-GENERAL INFORMATION

General Process Information:

RJF International Corporation, located at 700 BF Goodrich Road in Marietta, produces a variety of polyvinyl chloride (PVC) products for industrial and commercial use. Their products include Koroseal and Victrex wallcoverings, wall protection products, dry erase surfaces, industrial transit matting, Koroclear sheet products, and specialty films. The plant, which was previously owned and operated by B.F. Goodrich dating back to 1947, was taken over by RJF in 1988. The plant is a 295,000 square foot facility located on 67 acres along the west bank of the Muskingum River in the village of Oak Grove. An on-site natural gas power plant provides steam for the manufacturing plant. The PVC production process involves compounding, milling, calendaring, embossing, laminating, and printing operations. The plant has a series of 15,000 gallon carbon steel tanks, located in an outside tank farm, for the storage of plasticizer and other chemicals used in production. One of the tanks formerly stored methyl ethyl ketone (MEK), which was used as a solvent in the process. RJF has eliminated much of the MEK use in the plant, however, MEK soaked rags are generated in the lab during cleanup operations. Solvent-based inks have been replaced with water based inks. PVC stabilizers containing lead and cadmium have been replaced with zinc and barium compounds, except for the #1 mill line that still uses lead based stabilizers. RJF has an electroplating operation where embossing rolls are created and repaired for internal use in the plant. This process uses silver and lead compounds which generate electroplating wastes; the electroplating water is non-hazardous, but the roll pouring water is a D008 hazardous waste. The majority of the PVC scrap generated at the plant is reworked back into the process. Used oil generated from the various machinery at the plant is sent off-site for recycling.

Regulatory/Enforcement History:

The last compliance evaluation inspection was conducted at RJF on February 1 and February 5, 2007. RJF is normally a Small Quantity Generator, but at times is an episodic large quantity generator.
