**RE: Inspections of Lapparell Road Site
-NOTICE OF VIOLATION-**

Dear Mr. Miller:

On December 11, 2006, and January 11, 2007, and several additional dates, inspections of the wood waste site located at 1617 Lapparell Road, Latham, Ohio were performed. The site received wood waste generated by and shipped exclusively from the Mill's Pride cabinet plant in Waverly, Ohio. On December 11, 2006, Dan Bergert inspected the facility. On January 11, 2007, Dan Bergert and Patrick Hudnall were accompanied by Dave Hunt and Kelly Capuzzi of this office. In addition to these inspections, inspections of the leachate collection pond and the leachate management system were also made that were previously documented in a Notice of Violation (NOV) letter dated January 26, 2007. The purpose of the inspections was to evaluate compliance with the Agreed Judgement Entry Resolving the State's Motion for Preliminary Injunction (AJPI) that was filed with Pike County Court on April 15, 2005, the Consent Order Preliminary Injunction (COPI) that was filed with the Pike County Court on November 28, 2001, Director's Final Findings and Orders (DFFO's) issued on September 16, 1994, special solid waste conditions incorporated into your Surface Water Permit-To-Install (PTI), issued on July 19, 1995, Ohio Administrative Code (OAC) Chapter 3745-27, and Ohio Revised Code (ORC) 3734 and 6111. Previous letters dated January 26, 2007, addressed issues dealing with leachate management at the site. This letter serves to address those issues not previously covered in the referenced letters.

Wood Waste Pile Draw Down

Based on the data provided within your monthly draw down reports submitted by Miller Salvage, Inc., you continue to be in violation of the following:

AJPI PARAGRAPH 5F, FILED APRIL 15, 2005

Within three (3) months after the effective date of this Order, and every three (3) months thereafter, Defendants shall cause the removal of at least 9,000 tons of wood waste material from the new wood waste pile.

As per the terms of Paragraph 5f of the November 28, 2001, COPI, Miller Salvage has submitted monthly records that report the amount of waste drawn down from the site. This office has not received monthly drawdown reports for the months of November 2006 or December 2006. Failure to submit monthly draw down reports along with no observed removal of wood waste during November 2006 or December 2006 indicate that no wood waste has been removed from the site since at least October 15, 2006. The draw down schedule for this period has not been met.

OBSERVATIONS BY DATE

At various times in the Fall of 2005 and also in the early Summer of 2006, it was observed Miller Salvage operator was taking steps to recover waste from the Old Footprint area, in the field west of the existing site. Complete clean-up of this material has been a requirement of both the COPI and the AJPI. A bulldozer was used to scrape off the wood waste into windrows, then the loader was used to pickup and haul the material back to the stockpile at the existing site. However, all of the wood waste material has not been removed from the old footprint area.

December 11, 2006 Observations

No further efforts to remove the remaining areas of ground or partially ground wood waste from the Old Footprint area were observed. No efforts to reestablish a vegetative cover on the Old Footprint area were observed.

During the December 11, 2006, and January 11, 2007, site inspection and all other inspections noted in the January 26, 2007 NOV letter, it was observed that the old pond was still present at the site and no work had been done to remove the accumulated leachate, solid waste, or sediment from the pond. The leachate collection ditches surrounding the wood waste pile were crudely constructed without uniform shape, slope, or liner material.

Miller Land Company continues to be in violation of the following:

AJPI, PARAGRAPH 5B, FILED APRIL 15, 2005 - (relevant to construction per the PTI)

Within ninety (90) days of approval of the PTI by Ohio EPA, Defendants shall complete construction of the new leachate collection pond in accordance with their approved PTI.

The PTI was approved on July 28, 2005. The deadline for the construction of the new pond and all ancillary construction required by the PTI was October 26, 2005. The PTI specified that the existing pond would be cleaned of all accumulated leachate, solid waste and sediment, and backfilled. The PTI also specified that where new sections of leachate collection ditch were required, said ditch would be constructed with a bottom width of three (3) feet, side slope ratio of 3:1, a depth of five (5) feet and the ditch would be lined with two (2) feet of compacted clay. According to the approved plans, the leachate collection ditch starting at the southeastern corner of the pile and traversing around the southern end of the pile and north along the western edge of the pile to the new leachate collection pond was a new section of ditch, and should have been constructed per the specification on page 9/13 of the approved construction plans. Neither of these construction activities had been completed at the time of the January 11, 2007, site inspection and all other site inspections noted in the January 26, 2007, NOV letter. Immediately complete the above mentioned construction activities.

AJPI, PARAGRAPH 5C, FILED APRIL 15, 2005 - (relevant to new leachate collection pond)

Within thirty (30) days after completion of the new leachate collection pond, Defendants shall submit to Ohio EPA SEDO a construction certification report, prepared by an independent professional engineer registered in Ohio, certifying that the pond was constructed in accordance with the approved PTI.

The new leachate collection pond construction was completed and placed into operation on or around December 1, 2005. The deadline for the submittal of the required certification report was approximately January 1, 2006. To date, Ohio EPA SEDO has not received any such report. Immediately retain the services of an independent professional engineer, registered in the state of Ohio, to complete a construction certification report for the new leachate collection pond.

LETTER TO: ROBERT MILLER
JANUARY 29, 2007
PAGE 3

AJPI, PARAGRAPH 5E, FILED APRIL 15, 2005 - (relevant to existing old pond)

Within thirty (30) days after completion of the new leachate collection pond, Defendants shall remove and properly dispose, land apply, or treat all remaining accumulated leachate, solid waste, and sediments from the existing pond. Within seven (7) days of removal of all solid waste and leachate from the old pond, either 1) remove the existing pond, or 2) repair and reline the existing pond in accordance with the standards set forth in PTI 06-4142 to use as a back up to the new pond.

As noted above, the new leachate collection pond construction was completed and placed into operation on or around December 1, 2005. The deadline for the removal and proper disposal of the pond's contents was approximately January 1, 2006. As observed during the January 11, 2007, site inspection and all other site inspections noted in the January 26, 2007, NOV letter, the existing pond still contained leachate, solid waste and sediment. No work had been done to restore the liner of the old pond to the standards set forth in PTI 06-4142. Immediately remove all accumulated leachate, solid waste and sediment from the old pond for proper disposal and backfill the old pond per the approved construction plans.

AJPI PARAGRAPH 5L, FILED APRIL 15, 2005

Within one hundred eighty (180) days after the effective date of this Order, the Defendant shall completely remove all remaining wood waste material from the old footprint located between the new wood waste stockpile and Kincaid Creek.

This order required that all remaining wood waste from the old footprint area be completely removed by no later than October 12, 2005. As noted above, discreet areas of residual wood waste material remains on site. Leachate from this waste material discharges into the groundwater and into Kincaid Creek. All additional remaining waste must be removed immediately.

and

COPI, PARAGRAPH 5Q, FILED NOVEMBER 28, 2001

Immediately remediate areas previously occupied by unpermitted storage piles by removing residual debris and restoring a dense vegetative cover.

As noted above, the entire field is currently barren and no steps have been taken to reestablish a vegetative cover. Areas of residual wood waste remains. The remaining wood waste must be removed and steps taken to revegetate the field.

and

SPECIAL TERMS AND CONDITIONS, PARAGRAPH 3 OF PTI #06-4142 ISSUED JULY 19, 1995

Within two hundred and seventy days (270) of the effective date of this permit, *any waste stored outside the areas specified in the approved plans for storage piles* shall either 1) be moved to within the areas specified within the approved plans to ensure runoff from the storage piles is collected and contained in the surface water collection system and the collection ponds, or 2) be removed to a licensed solid waste disposal or transfer facility, a properly authorized location for land application or beneficial use, or a resource recovery facility.

This condition required that the old storage pile be completely removed by no later than April 14, 1996. As noted above, discreet pockets of residual wood waste material remains on site. Leachate from this waste material discharges into the groundwater and into Kincaid Creek. All additional remaining waste must be removed immediately.
