Hazardous Waste

July 26, 2011

Mr. Victor Scorziell
Maintenance Supervisor
Tronair, Inc.
1740 Eber Road
Toledo, Ohio 43528

Dear Mr. Scorziell:

Thank you for accompanying Melissa Boyers and me during the Ohio Environmental Protection Agency's (Ohio EPA's) July 12, 2011, hazardous waste compliance evaluation inspection of Tronair located in Toledo, Ohio. We inspected Tronair to determine its compliance with Ohio's hazardous waste laws as found in Chapter 3734 of the Ohio Revised Code (ORC), and Chapter 3745 of the Ohio Administrative Code (OAC). Pollution prevention options were also discussed during this inspection. This letter will explain the violations found and what you need to do to correct these violations.

Tronair manufactures, machines, welds, paints and assembles various ground support equipment for the aviation industry. Wastes generated include; used oil which is recycled, paint and solvent waste (D001, D035, F003, F005), universal waste lamps, parts washer solvent as part of Safety Kleen's continued use program and paint booth filters which are currently disposed of as solid waste.

At the time of my inspection, Tronair was operating as a conditionally exempt small quantity generator (CESQG) of hazardous waste.

I found the following violations of Ohio's hazardous waste and used oil laws. In order to correct these violations you must do the following and send me the required information within 30 days of your receipt of this letter:

1. Waste Evaluation, OAC Rule 3745-52-11:

Any person who generates a waste must determine if that waste is a hazardous waste by using generator knowledge or by testing the waste.

At the time of the inspection, Tronair did not have waste evaluation documentation for the spent paint booth filters. Tronair has historically disposed of this spent material as a non-hazardous waste. Tronair must immediately cease disposing of the waste paint filters as non-hazardous waste until a proper waste evaluation has been completed.

Tronair must obtain a representative sample of the spent paint booth filter waste stream and have it analyzed for Toxic Characteristic Leaching Procedure (TCLP) Resource Conservation and Recovery Act (RCRA) metals (SW-846 Method 1311/6010) and volatile organics (SW-846 Method 1311/8260).

To abate this violation, Tronair must submit a copy of the analytical results to Ohio EPA. Once analytical results have been reviewed, Ohio EPA will advise you on proper disposal options as well as plans for the future management of this waste stream.

Ohio EPA will review the submitted waste evaluation information and determine if there is a change in Tronair's generator status. Additional violations may be cited based upon your determined generator status. You will be notified of any additional violations in a separate letter.

2. Labeling of Used Oil, OAC 3745-279-22(C)(1):

Generators must label or mark containers holding used oil with the words "Used Oil".

Tronair had several drums labeled Waste Oil at the time of inspection. I advised you of the wording in the regulations and that they must be labeled "Used Oil".

To abate this violation, you must label the containers with the words "Used Oil" and send me photographs or email documentation showing that this has been done.

On July 13, 2011, you submitted, via email, photographs of the drums properly labeled "Used Oil". Therefore, this violation is considered abated.

3. Universal Waste Management, OAC Rule 3745-273-13(D)(1):

Universal waste lamps must be in closed containers which are adequate to prevent breakage.

Tronair had an open box of universal waste lamps.

Tronair closed this box the lamps at the time of inspection. Therefore, this violation is considered abated.
