Re: Canal Pointe Improvements / Franklin County

Dear Mr. Peoples:

The letter is written regarding the storm water inspection I conducted on August 26, 2009, of the Canal Pointe Improvements located at the end of Dove Parkway. The construction activities are currently covered under the General Storm Water Permit Associated with Construction Activities. Based on the site inspection and the General Storm Water Permit, the following items must be addressed:

Sediment and Erosion Controls:

- During the inspection, a turbid discharge containing sediment and iron from dewatering water was discharging off-site from the sediment basin. The sediment basin did not have a riser with filter fabric and no other best management practices were implemented to remove the sediment or iron from the discharge. Controls must be implemented to remove the sediment and iron from the discharge. Stone and straw bales may be effective. Please be aware that the agriculture standard for iron is 5,000 micrograms per liter. Please see attached pictures.
- Please be aware that silt fence must be installed around the site. The silt fence must be inspected weekly or after a significant rain event. An inspection log must be kept at the site of the inspections, as well as, the storm water pollution prevention plan (SWP3). The inspection log and SWP3 was not available for me at the site. Please see attached pictures.

Ted Strickland, Governor
Lee Fisher, Lieutenant Governor
Chris Korfeski, Director
