RE: AIRCRAFT PLATING CORP.
CUYAHOGA COUNTY
OHD 004 176 681
LQG, NOTICE OF VIOLATION (NOV)

Gerald Ott
Aircraft Plating Corporation
1106 Clark Avenue
Cleveland, OH 44109-1824

Dear Mr. Ott:

On February 29, 2012, Sherry Slone and I as representatives of the Ohio EPA Division of Materials and Waste Management, conducted a compliance inspection of the Aircraft Plating Corporation (Aircraft Plating) facility located at 1106 Clark Avenue, Cleveland, for compliance with Ohio's hazardous waste and used oil regulations. You represented Aircraft Plating during the inspection.

Aircraft Plating conducts electroplating of copper, zinc, and tin on carbon steel. Process wastewaters are routed to the on-site wastewater treatment unit. Filter cake (F006) from the wastewater treatment unit is recycled. The 90 day accumulation area for filter cake is located near the filter press.

Hazardous wastes generated from facility operations are waste water treatment unit filter cake (F006), which is generated routinely, and waste cyanide solution (F007, D002, D003), which is generated infrequently. Several other secondary materials that exhibit a hazardous waste characteristic are re-used and so are not classified as wastes.

The inspection included a review of the facility's operations, as well as waste management practices and documentation. Aircraft Plating was inspected for the requirements of a large quantity generator (LQG) of hazardous waste because the facility generates more than 2,200 pounds of hazardous waste in a calendar month.

Based on observations made during the facility walk-through and inspection, Ohio EPA has determined that Aircraft Plating has violated the following state hazardous waste, used oil and universal waste regulations:

1. **OAC rule 3745-65-16(C) – Annual review of initial training.**
OAC rule 3745-65-16(D)(4) – Must maintain training program records.
OAC rule 3745-65-16(E) – Training records must be kept

For large quantity generators of hazardous waste, facility personnel that have hazardous waste management responsibilities must be included in a personnel training program. OAC rule 3745-65-16(C) requires that such personnel take part in an annual review of the initial required training. OAC rule 3745-65-16(D) requires that records of such annual training be kept. OAC rule 3745-65-16(E) requires that training records for current personnel be kept until closure of the facility, and for former employees, for at least three years from the date the employee last worked at the facility.

At Aircraft Plating two persons are included in the hazardous waste training program. The only documentation of annual refresher training for these two persons provided by Aircraft Plating during the inspection was for the year 2011. No documentation was provided for the other years since the previous inspection in 2007.

If you are able to locate documentation that annual re-training was conducted for additional years since 2007, please provide it in your response to this notice of violation.

To return to compliance Aircraft Plating must create a written plan that:

- Tracks when annual training is required;
- Includes a system to alert you when the training is required;
- Documents when the annual training is completed;
- Documents information on the content of the training provided; and,
- Describes how the records will be maintained so that training records for current personnel are kept until closure of the facility, and for former employees, for at least three years from the date the employee last worked at the facility.

This plan must be submitted to this office within 14 days of the date of receipt of this letter.

2. OAC Rule 3745- 66-74 Weekly Inspections of Hazardous Waste Containers

A large quantity generator of hazardous waste is required to inspect all containers of hazardous waste in the 90 day accumulation area at least weekly and to record the inspections in a log or summary. At the time of the inspection no containers were in the 90 day area near the filter press, but apparently containers of waste water treatment unit filter cake (F006) are commonly kept in the 90 day area. The inspection documentation forms provided by Aircraft Plating during the inspection had been completed monthly rather than weekly.

To return to compliance Aircraft Plating must:

- Prepare a weekly inspection form for the 90 day accumulation area;
- Immediately begin conducting weekly inspections of the hazardous waste containers in the 90 day accumulation area; and,
- Submit copies of the inspection forms completed for at least one week to this office within 14 days of the date of receipt of this letter.

If no waste is present in the 90 day area at the time of the weekly inspection, this should be noted on the inspection log. Completed inspection logs should be kept for three years.

An example inspection log is attached for your assistance in responding to this violation.

Enclosed you will find a copy of the checklists completed during the February 29, 2012 inspection.

Aircraft Plating needs to immediately take the necessary measures to return to compliance with Ohio's environmental laws. Within 14 days of receipt of this letter, Aircraft Plating is requested to provide documentation to this office including the steps taken to abate the violations cited above.

Documentation of steps taken to return to compliance includes written correspondence, updated policies, and photographs, as appropriate, and may be submitted via the postal service or electronically to neil.wasilk@epa.ohio.gov.

Please be advised that violations cited above will continue until the violations have been properly abated. Failure to comply with Chapter 3734 of the Ohio Revised Code and rules promulgated thereunder may result in a civil penalty of up to \$10,000 per day for each violation. It is imperative that you return to compliance. If circumstances delay the abatement of violations, Aircraft Plating is requested to submit written correspondence of the steps that will be taken by date certain to attain compliance.

Submit the above requested response documentation to this office **within 14 days** of receipt of this letter. Response correspondence sent by the U. S. Postal Service should be sent to:

Hazardous Waste Process Flow

Facility:

OHD 004 176 681

Aircraft Plating Corp.
1106 Clark Ave.
Cleveland, OH 44109

Facility has about 10,000 ft² of manufacturing and about 5,000 ft² of warehouse space.

Aircraft Plating does electroplating of copper (using copper cyanide), and zinc (alkaline zinc) and tin on carbon steel. Tin and zinc plating are a small part of the business. Tin was started recently. No longer doing nickel or brass plating. Two plating lines – one for zinc and one for copper. A chromate solution is used in the zinc plating process.

Passivation of stainless steel parts using citric acid to remove surface oxides also conducted, as is polishing of stainless steel.

Customers supply stamped parts which the facility then plates, passivates or polishes.

Have an on-site wastewater treatment system. All floor drains to wastewater treatment unit. Tank in the basement into which floor drain discharge. Water treatment is done in the tanks in basement. Cyanide destruction with bleach, metals precipitations by pH adjustment, flocculating agent, etc. Process wastewaters through the filter press about once a day; open the press to dump cake about once every 4 days. Each press opening produces about ¼ box of F006. Treated water to POTW. Filter cake is F006 which goes to Agmet for recycling. Storage area for F006 is near the filter press. Nothing in storage during inspection.

See attached *Process and Waste Summary* for more details on waste and how they are managed.
