**Re: Mid West Fabricating Company – Rockmill Division / Fairfield County
Industrial Storm Water Permit 4GR00368*DG**

Dear Mr. Shuttleworth:

This letter is written in regard to the storm water inspection that I conducted at Mid West Fabricating Company – Rockmill Division, located at 3115 West Fair Avenue, in Lancaster, Ohio. The inspection was conducted on October 12, 2010, to determine compliance with your industrial storm water permit. You stated that your company does metal fabrication. The following items were noted during the inspection:

1. Your company had a spill prevention plan at the facility. The plan needs to be updated annually or whenever there is a change in staff that administers the plan. Also, the names and phone numbers of the facility contacts should be listed in the plan and throughout the plant. The local fire department should be among the contacts.
2. There should be a spill kit at the loading dock. The spill kit should contain an absorbent material and several plugs to be used for the storm water drain at the loading dock. The storm water trench drain at the loading dock discharges directly to a ditch along Campground Road. If there is a spill at the loading dock, if staff is unable to contain the spill, then staff should insert plugs in the storm water trench drain to prevent the spill from getting to the storm water ditch. Please see attached pictures.
3. There was excessive debris and oil around the dumpster near the loading dock. There needs to be better housekeeping around the dumpster. Please see attached pictures.

If you have any questions regarding this letter or my inspection, please do not hesitate to contact me at our Central District Office at 614-728-3851.

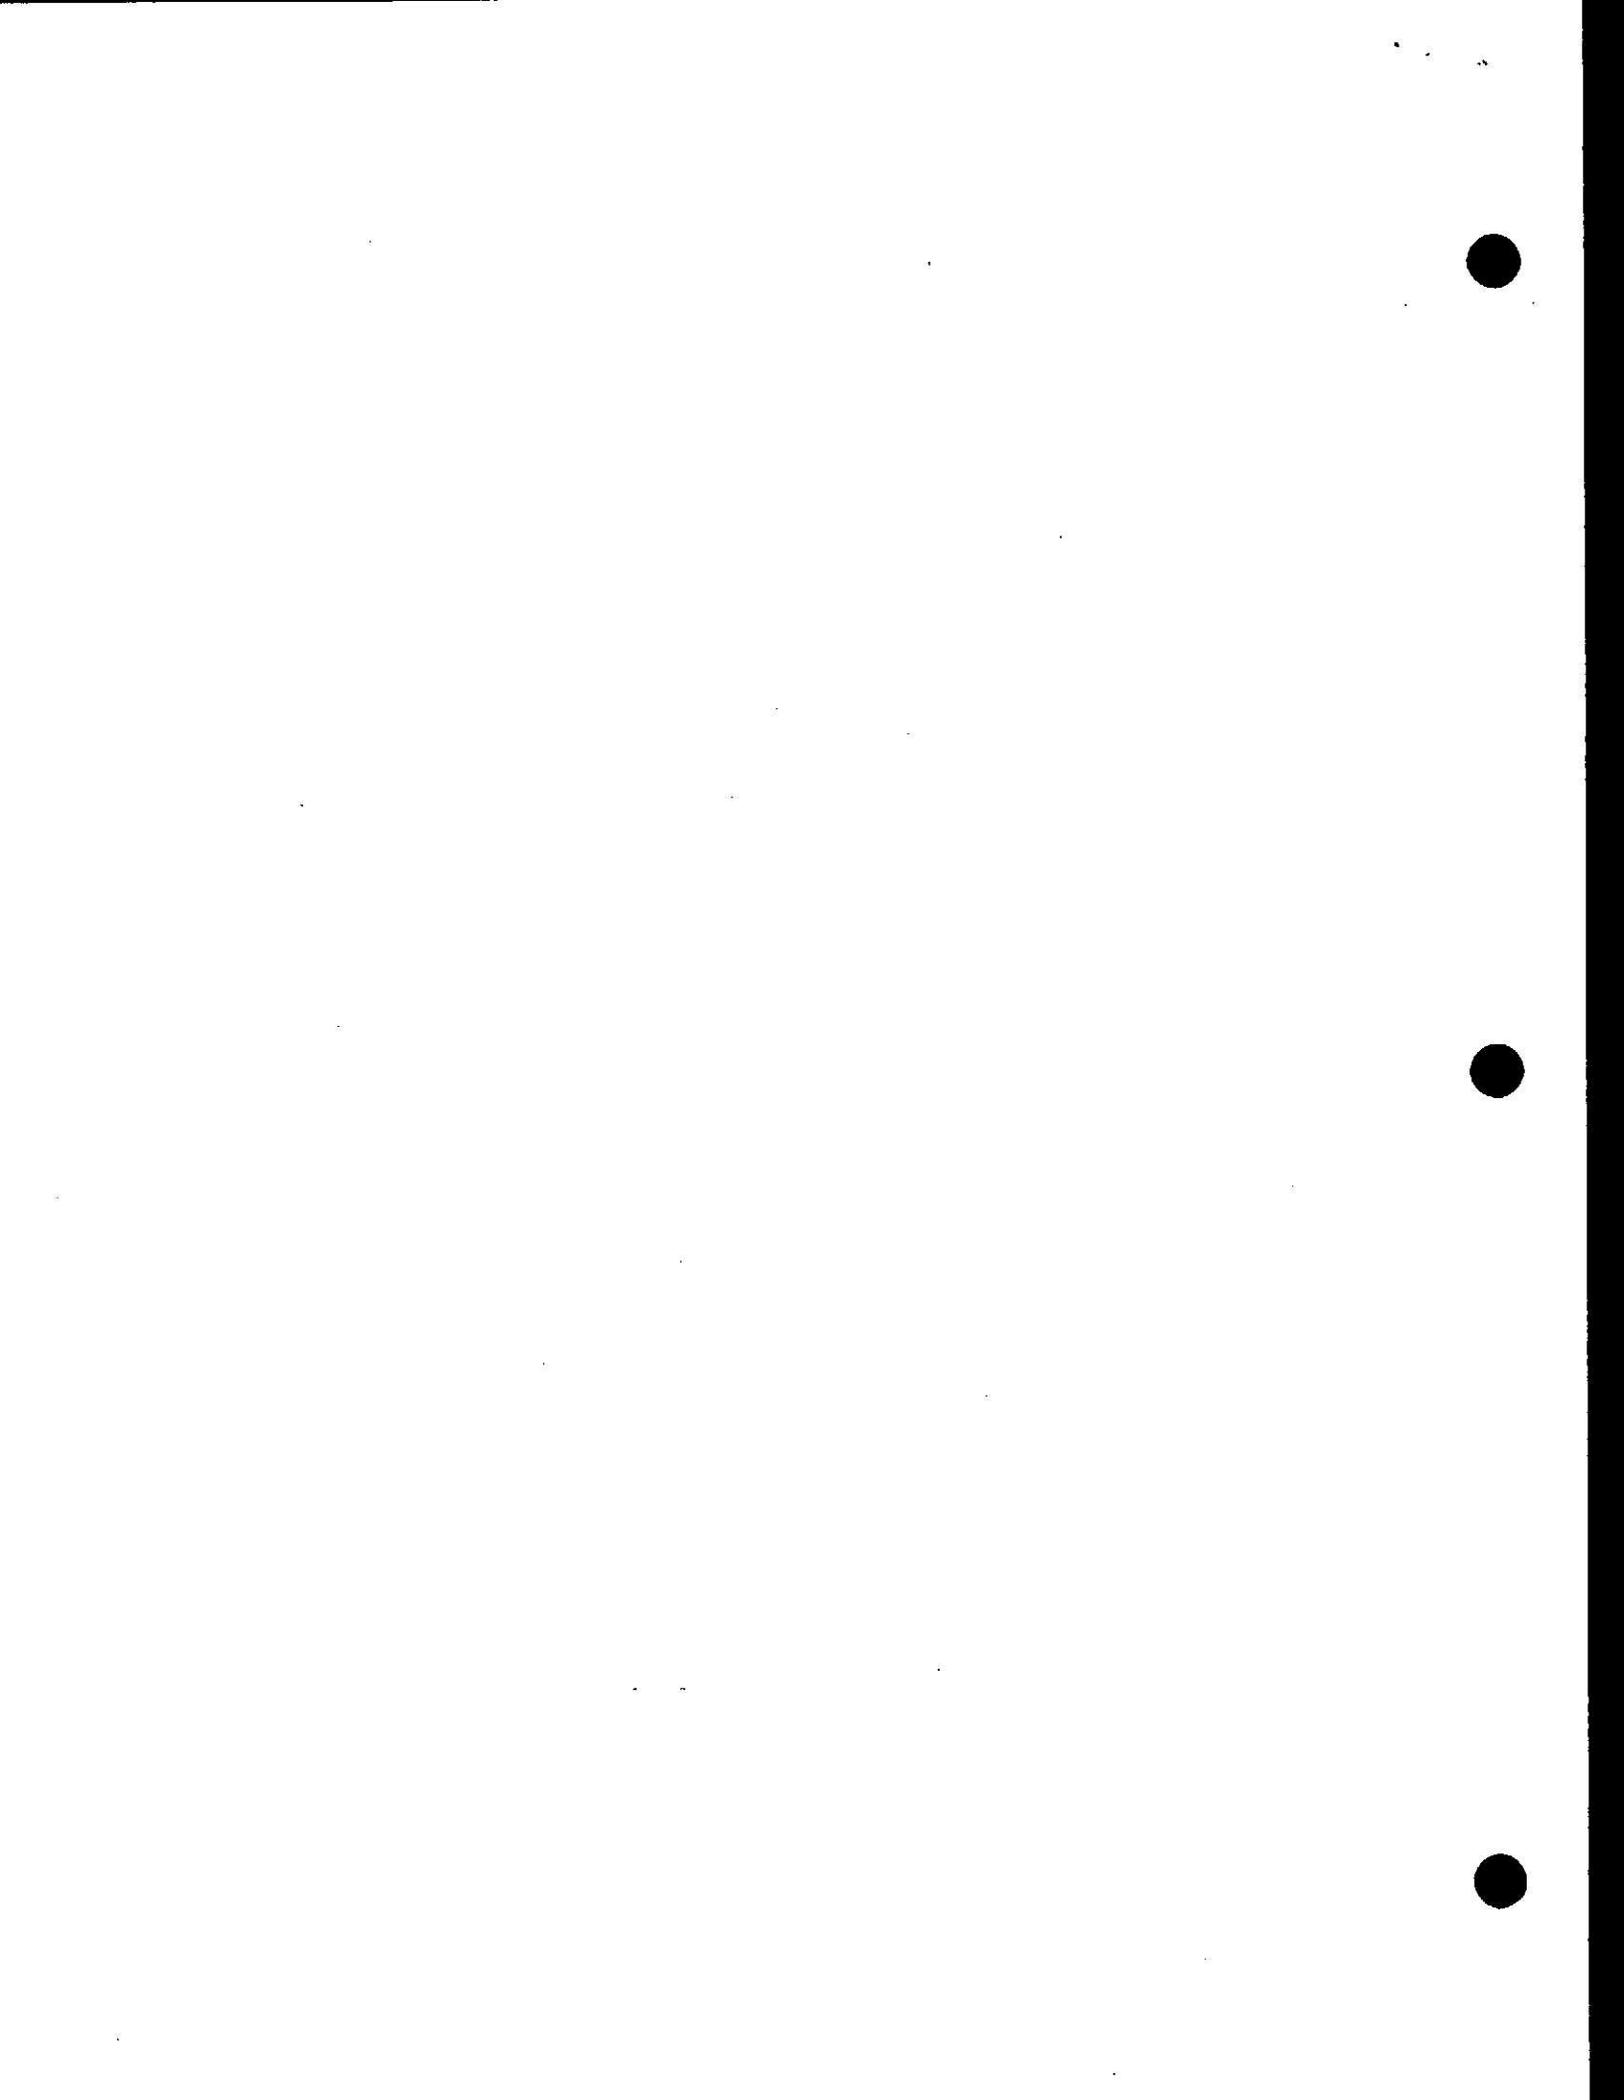

Sincerely,

Gregory L. Sanders
