Re: Georges Creek, Fairfield County

Dear Mr. Bauer:

This letter is written regarding the storm water inspection that I conducted at Georges Creek in Fairfield County, on June 8, 2010. I understand that these construction activities are currently covered under the General Storm Water Permit Associated with Construction Activities. Based on my site inspection and the General Storm Water Permit, the following items must be addressed.

Sediment and Erosion Controls

1. I noted two homes under construction during my inspection. One home had adequate controls including straw waddles and silt fence. The other home was near the sediment pond on the south side of the property. This home needed to have repairs made to the silt fence along the sediment pond and straw waddles maintained along the front of the property. Also, this home appeared to have barren areas at final grade. Please stabilize the barren areas. Please see attached pictures.
2. Please be aware the General Permit states that all barren areas which remain idle in excess of 21 days must be protected from erosion within 7 days of the last earth disturbing activities. In addition, erosion protection must be implemented for all areas of final grade within 7 days.

If you have any questions regarding this letter or my inspection, please do not hesitate to call me at our Central District Office at (614) 728-3851. A follow-up inspection will be conducted to ensure the minimum conditions of the General Permit have been met.

Sincerely,

Gregory L. Sanders
