**Re: Storm Water Inspection at Milliron Auto Parts
Permit Number (4GR00110*DG)**

Dear Mr. Milliron:

This letter is written in follow-up to a storm water inspection I conducted at Milliron Auto Parts located at 13769 Marne Road in Licking County, Ohio on April 26, 2010. This facility is currently covered under the General Storm Water Permit Associated with Industrial Activities. This inspection entailed the evaluation of materials and or processes exposed to storm water. Based on my preliminary inspection, the following items were noted:

Storm Water Management Practices:

- During the inspection, I had the opportunity to evaluate the receiving, processing and storage of vehicles subject to salvage. The best management practices (BMP's), at the time of this inspection, meet the intent of the conditions of the "General Storm Water Permit Associated with Industrial Activities." All processes and material storage were managed in such a manner to minimize off-site storm water pollution
- The site currently drains to a series of storm water impoundments which were monitored in according with the permit conditions. I have recently received the monitoring reports and currently evaluating the results.
- In all, I was impressed in the attention to detail this facility has demonstrate to minimize the potential of storm water pollution.

Diked Water Discharge Protocols:

- All discharges associated with the release of storm water accumulated in areas of secondary containment must be inspected and logged prior to the release. The logs must include the authorized representative conducting the release, the time and date, and sampling results to ensure the storm water is not contaminated.

Ted Strickland, Governor
Lee Fisher, Lieutenant Governor
Chris Korfeski, Director

Spill Prevention, Control, and Countermeasure (SPCC) Plan:

- In accordance with 40 CFR, Part 112, this facility may require the development of a SPCC plan if one of the following thresholds are met:
 1. Aggregate above ground oil storage capacity is greater than 1,320 gallons
 2. Buried oil storage capacity is greater than 42,000 gallons
- In the event the SPCC requirements are not triggered for this facility, the SWPPP must include remedial measures in the event of a spill.

Inside Floor Drains

- I did not note any inside drains during my inspection

Storm Water Pollution Prevention Plan (SWPPP)

- A SWPPP has been developed specific for this site. The SWPPP includes a site map which clearly delineates all storm water drainage patterns. All Best Management Practices (BMP's), current and future were inclusive in the SWPPP. The SWPPP has been reviewed and updated to reflect any changes at this facility. Guidance documents for preparing a SWPPP can be found at:

If you have any questions regarding this letter or my inspection, please do not hesitate to contact me at our Central District Office at 614-728-3844 or email at harry.kallipolitis@epa.state.oh.us. In addition, please provide a written response to this letter within seven days of receipt.

Sincerely,

Harry Kallipolitis
