**RE: GABRIEL PERFORMANCE PRODUCTS, OHD003913308,
PERMIT # 02-04-0078, ASHTABULA COUNTY, TSD/LQG CEI NOV/RTC**

Dear Mr. Workman:

On June 8, 2010, Sherry Slone and this writer, representing Ohio EPA, Division of Hazardous Waste Management (DHWM), visited Gabriel Performance Products, LLC (Gabriel) to conduct a hazardous waste compliance evaluation inspection. Gabriel was represented by Dennis Woodard and you. The purpose of this inspection was to determine Gabriel's compliance with Ohio's hazardous waste laws as found under Chapter 3734 of the Ohio Revised Code (ORC) and Chapter 3745 of the Ohio Administrative Code (OAC), as well as, Gabriel's hazardous waste facility installation and operation permit. Gabriel was inspected for compliance with the requirements of its hazardous waste facility installation and operation permit and as a large quantity generator (LQG) of hazardous waste.

On June 18 and June 28, 2010, I received your e-mails concerning the submittal of inspection related information.

Based on the inspection, Ohio EPA identified the following violations:

1. **OAC rule 3745-52-34(A)(3), Labeling Hazardous Waste Accumulation Containers:** While being accumulated on-site, each container with hazardous waste contents must be labeled with the words "Hazardous Waste."

Gabriel failed to label one, 55-gallon drum of hazardous waste that was observed in the RCRA Area. During the inspection, the drum was labeled as "Hazardous Waste." **This violation has been adequately abated. No further response is necessary.**

2. **OAC rule 3745-66-95(A)(1)-(4), Tank System Inspection Requirements:** Tank systems must be inspected, where present, at least once each operating day: (1) Overfill/spill control equipment (e.g., waste-feed cut-off systems, bypass systems, and drainage systems) to ensure that it is in good working order; (2) The aboveground portions of the tank system, if any, to detect corrosion or releases of waste; (3) Data gathered from monitoring equipment and leak-detection equipment (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design; and (4) The construction materials and the area immediately surrounding the externally accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs.

Gabriel failed to conduct the required tank system inspections on April 16, 2010. To prevent a reoccurrence of this violation, Gabriel conducted an incident investigation which was later distributed to pertinent employees. The investigation indicated that the missed inspection was a single event and not a systemic failure. **This violation has been adequately abated. No further response is necessary.**

3. **OAC rule 3745-273-13(D)(1), Universal Waste Management Standards for Small Quantity Handlers:** A small quantity handler of universal waste must contain any lamp in containers or packages that are structurally sound, adequate to prevent breakage, and compatible with the contents of the lamps. Such containers and packages must remain closed and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

Gabriel failed to accumulate universal waste lamps in a closed container. The container was observed in the Maintenance Building. During the inspection, the container was closed. **This violation has been adequately abated. No further response is necessary.**

4. **OAC rule 3745-273-14(E); Labeling/marketing Standards for Small Quantity Handlers of Universal Waste:** Universal waste lamps must be labeled/marked with one of the following phrases: "universal waste lamp(s)," or "waste lamp(s)" or "used lamp(s)."

Gabriel failed to label/mark universal waste lamps with the words required by this rule. The lamps were observed in the Maintenance Building. During the inspection, the lamps were labeled as "Used Lamps." **This violation has been adequately abated. No further response is necessary.**
