**Subject: Violation of Total Coliform Maximum Contaminant Level (MCL)
During Second Quarter of 2010 (Monthly)**

Anchor Fabricators is in violation of the Maximum Contaminant Level (MCL) for Total Coliform established by Ohio Administrative Code (OAC), Rule 3745-81-14. Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially-harmful bacteria may be present.

ACTION REQUIRED:

1. **Investigate and eliminate the cause of bacterial contamination.** Special purpose samples may be collected to investigate the source of contamination or to verify elimination of the problem (these samples cannot be collected to comply with monitoring or MCL requirements; label samples as "special purpose").
2. **Notify the people served by this water system.** Within 30 days issue the enclosed public notice in accordance with OAC, Rule 3745-81-32 by the following method(s) to reach all persons served.
 - Posting in conspicuous locations, such as bulletin boards, restrooms, drinking fountains, vending areas;
 - Mail or other direct delivery to each customer;
 - Send to parents or guardians of children at schools or day care facilities
E-mail, newsletters or newspaper;

- Posted notices must remain in place for as long as the violation exists, but in no case for less than seven days (even if the violation is resolved). The language in italics on the enclosed public notice is mandatory and must be included, as written. Do not make changes to the public notice without consulting with Ohio EPA beforehand.

3. Complete the enclosed verification form within 10 days of issuing the Public Notice and mail it to Ohio EPA - SWDO. Include a copy of each notice distributed, published or posted.

4. Monitor with at least five (5) routine samples in the month following a routine total coliform-positive result in accordance with OAC, Rule 3745-81-21(B)(7).

If you have any questions, please contact me at 937-285-6446 or Dave Secor at 937-285-6114.

Sincerely,

DRINKING WATER NOTICE

Tests showed coliform bacteria in Anchor Fabricators water

We routinely monitor for the presence of drinking water contaminants. We took _____
[number] samples for coliform bacteria during _____ [month and year]. _____
[Number/percentage] of those samples showed the presence of coliform bacteria. No more
than [1 sample per month/5 percent of our samples] may show the presence of coliform bacteria
during a month.

What should I do?

- You do not need to boil your water or take other corrective actions. However, if you have specific health concerns, consult your doctor. People with severely compromised immune systems, infants, and some elderly people may be at increased risk. These people should seek advice about drinking water from their health care providers.
- Total coliform bacteria are generally not harmful themselves. Usually, coliforms are a sign that there could be a problem with the system's treatment or distribution system.
- Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other, potentially harmful, bacteria may be present. Coliforms were found in more samples than allowed and this was a warning of potential problems.
- Fecal coliform or *E. coli*, which are bacteria of greater concern, were not detected in the follow-up testing.

What is being done?

Further testing shows that **coliform bacteria are no longer being detected** and this problem has been resolved.
