**Re: Storm Water Inspection at the Shoppes at East Broad/Permit #4GC02248\*AG**

Dear Mr. Muckley:

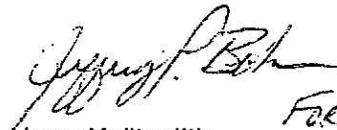

This letter is written in follow up to a construction storm water inspection I conducted at The Shoppes at East Broad located in Franklin County on December 30, 2009. The purpose of the inspection was to ensure continued compliance with the General Storm Water Permit Associated with Construction Activities. During the inspection, the following items were noted:

**Sediment and Erosion Controls:**

- The drainage channel leading to the sediment basin requires stabilization (See Photo Figure 1).
- In addition I noted the restoration efforts associated with the stream on the northern end of the site. Please continue to monitor the site to ensure successful vegetative establishment. I am concerned with the late planting.

If you have any questions regarding this letter or the inspection, please do not hesitate to contact me at our Central District Office at (614) 728-3844. Follow-up inspections will be conducted to ensure the conditions of the General Permit are continuing to be met.

Sincerely,

*For H.K.*

**Re: Columbus Transflo Terminal / Franklin County  
Industrial Storm Water Permit 4GR00391\*DG**

Dear Mr. Wilson:

This letter is written in regard to the storm water inspection that I conducted at the Columbus Transflo Terminal located at 3100 Lockbourne Road, in Columbus, Ohio. The inspection was conducted on January 5, 2010, to determine compliance with your industrial storm water permit. I noted a small storm water discharge from your facility via outfall 001 to an unnamed tributary of the Scioto River. This was most likely due to snow melt. Overall, the facility appeared to be very well-kept. The following items were noted during the inspection:

- Snow covered the site during the inspection. The facility had storm water catch basins along the rail lines. Along rail lines #5 and #6, stainless steel screens were fitted in the catch basins to filter plastic beads.
- The facility had secondary containment for fuel tanks and waste oil. The secondary containment dikes were painted a bright yellow. The storm water catch basins were also painted a bright yellow.
- I noted drip pans were being used when product was being off-loaded from the rail cars.
- No issues were noted at the site. Outfall 001 was visually inspected and appeared to be free of containments.
- A spill containment plan and storm water pollution prevention plan was updated and kept in your office. Environmental compliance forms were up-to-date and also kept in your office.
