SUBJECT: CCR VIOLATIONS

Dear Mr. Wolfe:

Ohio EPA has reviewed the 2007 Consumer Confidence Report (CCR) for the Oak Park Mobile Homes PWS on September 12, 2008. The CCR was reviewed for the required content. Based on our review, the Oak Park Mobile Homes public water system is in violation of the Ohio Administrative Code (OAC) Rules 3745-96-01 through 04 for failure to comply with the CCR requirements, the following violations were noted:

1. The Table of Detected Contaminants was not included in the report. You must list contaminants detected in your drinking water for the subject year, or the last time a contaminant was tested (since not all contaminants are sampled for annually).
2. Some of the required source water information was missing. Specifically, source water susceptibility language from your SWAP report was missing. A copy of this language is enclosed for your use.
3. The required public educational paragraphs did not meet the requirements set forth in the regulations. The required educational paragraphs are as follows:

The sources of drinking water both tap water and bottled water include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include: (A) Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife; (B) Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from

urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming; (C) Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; (D) Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; (E) radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, USEPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (1-800-426-4791).

Section 5: Who needs to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infection. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

This language is found in the CCR template available at our Web site at <http://www.epa.state.oh.us/ddagw/Documents/ccrtemplate08.pdf>.

4. Required definitions for terms used in the report were not included in the report. Definitions for acronyms, especially those that would have been used in a table of detected contaminants, need to be included in the CCRs.

Be sure to correct the violation(s) as appropriate in your next CCR. The next report for calendar year 2008 must be sent to your customers by no later than July 1, 2009. A copy of the CCR along with a Certification Form must be submitted to the Northeast District Office at the above address. Violations in future reports may result in further enforcement action.

If you have any questions, please contact me at (330) 963-1194.

Sincerely,

Beth Madis
