RE: PULL-A-PART LLC
3GR01177*DG
STORMWATER
CUYAHOGA COUNTY

Mr. Steve Levetan
Pull-A-Part
4473 Tilly Mill Rd
Atlanta, GA 30360

Dear Mr. Levetan:

On August 17, 2010, this writer conducted an inspection of your facility located at 12610 Kirby Ave in Cleveland (Cleveland East), to determine compliance with your Industrial General Storm Water NPDES permit referenced above. Todd Maher, the Senior Manager, was also present during this inspection. Below are my observations from the site inspection.

General:

1. This site is an automobile salvage yard and is split into two main drainage areas. The back part of the site is a car storage yard; the front section near the building is the car processing area.
2. Drainage from the car storage yard flows into a storm drain near the center of the yard. The car processing area drains into a catch basin located near the center of the processing area. Both drainage areas flow to the retention basin in the front of the property.
3. All the cars are drained of their fluids (oil, gas, antifreeze, etc.) inside a building; all fluids are contained and drained into tanks located behind the building within secondary containment (dike).

Inspection Observations:

1. While walking around the main processing area we noticed a few areas of concern. The concrete pad on which the car crusher sits has no berm or secondary containment to control any residual fluids from the crushed cars. You stated that the area is constantly policed to keep it clean. While not required, it is suggested that this area be roofed and a trench drain installed around the perimeter (under roof) to collect any stray liquids.
2. All dumpsters located on site need to have covers to keep rain water from coming into contact with pollutants especially the dumpsters containing the radiators and transmissions.

MR. STEVE LEVETAN

PAGE 2

Action Items

- Cover and seal the dumpsters on site.
- Develop secondary containment for the crusher pad.

If you should have any questions concerning this letter, feel free to contact Mike Stevens at (330) 963-1143 or by e-mail Mike.Stevens@epa.state.oh.us.

Sincerely,
