Dear Sirs:

On June 21, 2010, Sarah Clement and Judson Delancey inspected Dr. Lawrence P. Schmamel, DDS, Inc. at 4329 North Holland-Sylvania Road in Sylvania Township. The purpose of the visit was to check compliance of the site with the National Pollutant Discharge Elimination System (NPDES) permit for storm water discharges associated with construction activity, Facility ID No. 2 GC02449*AG. The inspection was conducted under the provisions of Ohio's water pollution control statutes, Ohio Revised Code (ORC) Chapter 6111. As a result of this inspection your site may be eligible to terminate your NPDES permit.

It appears that construction activities at Dr. Lawrence P. Schmamel, DDS, Inc. are near completion. Accordingly, a Notice of Termination (NOT) must be filed to relieve you of the obligation to comply with this general permit. An NOT may be filed if one or more of the following conditions have been met:

- Final stabilization has been achieved on all portions of the site for which the permittee is responsible. Final stabilization means that either:

All soil disturbing activities are complete and a uniform perennial vegetative cover of at least 70% density has been established over the entire site. All temporary erosion and sediment controls have been removed, properly disposed of, and all trapped sediment has been permanently stabilized.

- Another operator(s) has assumed control over all areas of the site that have not been fully stabilized.

While construction activities appeared to be complete, it was not apparent what permanent structural storm water management practices have been/ will be implemented on the site. Please send a written response describing what post-construction storm water management practices have been/ will be implemented within 10 days of the date on this letter. The permit requires that post-construction Best Management Practices (BMPs) are installed during construction to control pollutants in the storm water discharge that will occur after construction has concluded. Such practices may include, but are not limited to: storm water extended detention structures; retention structures; water quality swales; bioretention areas. Your reply should include type(s) of practices, the basis for its design, and installation dates. When all permit conditions have been met please file the NOT form. The form can be found on our website: <http://www.epa.ohio.gov/dsw/storm/stormform.aspx>. NOTs must be filed with Ohio EPA's Central Office within 45 days of when the above criteria are met.

If there are any questions, please contact me at (419) 373-3009.

Sincerely,

Lynette Hablitzel, P.E.
