Re: Lucas County  
Taco Bell  
Construction  
Storm Water

August 6, 2010

Mr. Clint Langley  
Taco Bell of America, Inc.  
104 Lisa Court  
McMurray, Pennsylvania 15317

Dear Mr. Langley:

On July 8, 2010, Sarah Clement and Judson Delancey inspected Taco Bell at 7240 West Central Avenue in Sylvania Township, Ohio. The purpose of the visit was to evaluate compliance of the site with the National Pollutant Discharge Elimination System (NPDES) permit for storm water discharges associated with construction activity, Facility ID No. 2 GC02300\*AG. The inspection was conducted under the provisions of Ohio's water pollution control statutes, Ohio Revised Code (ORC) Chapter 6111. Ohio EPA has no record of other permittees for this site. As a result of this inspection, your site may be eligible to terminate your NPDES permit.

It appears that construction activities at Taco Bell are near completion. The building was completed, the drive and parking lot were paved, and the disturbed land surrounding the building had a vegetative cover. Accordingly, a Notice of Termination (NOT) must be filed to relieve you of the obligation to comply with this general permit. An NOT may be filed if one or more of the following criteria have been met:

- Final stabilization has been achieved on all portions of the site for which the permittee is responsible. Final stabilization means:

All soil disturbing activities are complete and a uniform perennial vegetative cover of at least 70% density has been established over the entire site. All temporary erosion and sediment controls have been removed, properly disposed of, and all trapped sediment has been permanently stabilized; or

- Another operator(s) has assumed control over all areas of the site that have not been fully stabilized.

Mr. Clint Langley

The permit requires that post-construction Best Management Practices (BMPs) are installed during construction to control the pollutants in the storm water discharges that will occur after construction has concluded. Such practices include, but are not limited to: storm water extended detention structures; retention structures; water quality swales; and bioretention areas. It appears that a swale and rock check dam on the south side of the site, near Central Avenue, were installed to meet this permit condition.

It appears that your site meets one or more of the above criteria. If you believe the same is true and you have installed the site's permanent structural storm water control, please file the NOT form. The NOT form can be found on our website: <http://www.epa.ohio.gov/dsw/storm/stormform.aspx>. NOTs should be filed with Ohio EPA's Central Office within 45 days of when the above criteria are met.

If there are any questions, please contact me at (419) 373-3009.

Sincerely,

Lynette Hablitzel, P.E.  
Division of Surface Water  
Storm Water Program
