RE: Richland County
Madison Community Youth Park
Non-Community, Transient
PWS ID: OH7047612

Mr. Steve Kanz
Madison Community Youth Park
2264 Crider Road
Mansfield, Ohio 44903

Subject: Violation of Total Coliform Maximum Contaminant Level (MCL)
During Second Quarter of 2009 (Monthly)

Madison Community Youth Park is in violation of the Maximum Contaminant Level (MCL) for Total Coliform established by Ohio Administrative Code (OAC), Rule 3745-81-14. Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially-harmful bacteria may be present.

Sample Date	Sample Tap	Total Coliform	E. coli	Fecal Coliform	Sample Number	Lab Number

06-02-09	Women's Restroom	Positive	Negative	--	81391	820

ACTION REQUIRED:

1. Investigate and eliminate the cause of bacterial contamination. Special purpose samples may be collected to investigate the source of contamination or to verify elimination of the problem (these samples cannot be collected to comply with monitoring or MCL requirements; label samples as "special purpose").
2. Notify the people served by this water system. Within 30 days issue the enclosed public notice in accordance with OAC, Rule 3745-81-32 by the following method(s) to reach all persons served.

DRINKING WATER NOTICE

Tests show coliform bacteria in Madison Community Youth Park's water

We routinely monitor for the presence of drinking water contaminants. We took a routine sample on 5-26-09 and four (4) repeat samples on 6-2-09. All of those samples showed the presence of coliform bacteria. No more than one (1) sample may show the presence of coliform bacteria.

What should I do?

- *You do not need to boil your water or take other corrective actions. However, if you have specific health concerns, consult your doctor. People with severely compromised immune systems, infants, and some elderly people may be at increased risk. These people should seek advice about drinking water from their health care providers.*
- *Total coliform bacteria are generally not harmful themselves. Usually, coliforms are a sign that there could be a problem with the system's treatment or distribution system.*
- *Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other, potentially harmful, bacteria may be present. Coliforms were found in more samples than allowed and this was a warning of potential problems. Fecal coliform or E. coli, which are bacteria of greater concern, were not detected in the water.*

What is being done?

We are still detecting coliform bacteria. We are investigating and taking the necessary steps to correct the problem as soon as possible.
