# DRINKING WATER NOTICE

## Tests show coliform bacteria in St. Josephs Catholic Church - Blakeslee's water

St. Josephs Catholic Church - Blakeslee is in violation of the Maximum Contaminant Level (MCL) for Total Coliform established by Ohio Administrative Code (OAC), Rule 3745-81-14. Repeat samples taken pursuant to OAC 3745-81-21(B) shall be used to determine compliance with the maximum contaminant level for total coliforms as set forth in OAC, Rule 3745-81-14. A routine sample was collected November 16, 2010 and four (4) repeat samples were collected December 7, 2010. Four (4) of the five (5) samples were Total Coliform Positive.

### What should I do?

- You do not need to boil your water or take other corrective actions. However, if you have specific health concerns, consult your doctor. People with severely compromised immune systems, infants, and some elderly people may be at increased risk. These people should seek advice about drinking water from their health care providers.*
- Total coliform bacteria are generally not harmful themselves. Usually, coliforms are a sign that there could be a problem with the system's treatment or distribution system.*
- Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other, potentially harmful, bacteria may be present. Coliforms were found in more samples than allowed and this was a warning of potential problems. Fecal coliform or E. coli, which are bacteria of greater concern, were not detected in the water.*

### What is being done?

We are still detecting coliform bacteria. We are investigating and taking the necessary steps to correct the problem as soon as possible.
