Re: **Kokosing Construction Company**

OHD004487683
Knox County

Dear Mr. Sellers:

Thank you for accompanying me during Ohio EPA's June 26, 2012, inspection of Kokosing Construction Company's facility in Fredricktown, Ohio. We inspected Kokosing to determine its compliance with Ohio's Hazardous Waste, Used Oil, and Universal Waste laws as found in Chapter 3734 of the Ohio Revised Code (ORC) and Chapter 3745 of the Ohio Administrative Code (OAC). This letter will explain the violations we found and what you need to do to respond.

We found the following violations of Ohio's hazardous waste laws. In order to correct these violations you must do the following and send me the required information **within 15 days of your receipt of this letter**.

1. Personnel Training [OAC 3745-65-16 (D)(2)]

The owner or operator shall maintain the following documents and records at the facility: A written description for each position listed under the facility's job titles.

Kokosing did not have the appropriate job description for those employees who handle the hazardous waste disposal, specifically for the facility supervisor, shipping personnel and general laborer.

Kokosing needs to generate and implement correct job descriptions for all employees who may handle hazardous waste. Please submit copies of all updated job titles and job descriptions which pertain to hazardous waste.

2. Contingency Plan (OAC 3745-65-54)

The contingency plan shall be reviewed, and immediately amended, whenever; rules are revised, the facility changes in its design, the list of emergency coordinators change, the list of emergency equipment changes, or as required by the director. Kokosing had not updated the list of emergency coordinators in the contingency plan.

Kokosing must amend their plan whenever changes occur and submit the revisions to all applicable parties. Please submit a copy of the revised plan to Ohio EPA within 15 days of receipt of this letter.

PROCESS DESCRIPTION SECTION

Give a general process description (include all processes done at the facility)

Kokosing Construction Company is the largest privately held construction company in Ohio. They offer services like project management, concrete construction, steel erection, machinery erection, treatment plants, sewer and water lines, and concrete and asphalt paving. This facility, along with being Kokosing's headquarters is also its main service center for large trucks, tractor trailers, and construction equipment. Kokosing routinely does maintenance, minor repairs, and oil changes on all of its vehicles. The maintenance facility also acts as a hub for all of the company's hazardous waste.

The Hazardous waste generated by Kokosing initially comes into the facility as off-specification material that has either gone out of shelf life or frozen over the winter. Once this material is determined a hazardous waste (D001, D002, D003) it is taken to the hazardous waste accumulation area (located in the south western corner of the property) where it is stored in 55 gallon drums or 5 gallon buckets. The waste is then picked up by Chemtron. Due to freezing and improper handling the highest generation months for Kokosing are December through March but the actual amount varies. Kokosing has also started to add heated storage facilities to prevent freezing over the winter months. Material purchases have also been centralized to avoid over buying so hazardous materials do not exceed their shelf life.

Kokosing also generates a fair amount of used oil from both its on-site oil water separator and its off-site maintenance operations. The off-site oil is then brought back to the Fredricktown facility where it is picked up along with the oil from the oil water separator by Capital City Oil. Kokosing also recycles its used antifreeze with Dickenson Recycling. The maintenance shop also uses a nonhazardous parts washer serviced by Zep. The company recycles its batteries with Interstate and sends all of its scrap metal to Ross Brothers recycling.

Kokosing has a on-site paint booth for vehicle maintenance. The filters from this unit have been evaluated as non-hazardous and are disposed of as solid waste. The facility also has a solvent recycling unit on-site, this unit typically recycles 25-30 gallons of solvent per month generating a paint sludge.

WASTE ACTIVITIES SUMMARY SECTION

For each of the processes listed above that generate a waste give the following information: (1) name of process generating waste, (2) name or description of waste generated, (3) EPA waste codes, (4) quantity generated per month, (5) type of accumulation container used, (6) waste accumulation location in facility, (7) type of on-site treatment (if used), (8) name of off-site management facility (9) type of activity occurring at off-site management facility and (10) P2 activities

Hazardous waste is generated from construction activities. This waste stream varies

greatly depending on each specific job and the chemicals left over. It can be anything from waste paint and thinners to general adhesives and cleaners. Some are off-spec due to freezing. D001, D002, D003, D004, D007, D007, D009, D012, D025, D033, D035, D040, F002, F003, F005. These products all come back in their original containers until they are evaluated and declared a waste. The waste is stored on a covered concrete pad for up to 90 days where it is then shipped to Chemtron for incineration.

Non hazardous wash bay sludge is generated from cleaning trucks and is sent off every 2 months to Chemtron for disposal.

Scrap metal goes to Ross Brothers

Used oil is shipped to Capital City Oil.

Filters from the paint booth and shot blast are non haz and sent to Chemtron.

Bulbs and batteries are sent off as universal waste to Chemtron every six months.

NOTE: This is done by determining if the HW/soil contains levels of constituents greater than the levels given in its LDR treatment standard in 3745-270-40. However, if a specific treatment method is given in 3745-270-40 for the HW, no determination is required [3745-270-07(A)(1)(b)]. If soil, generator can choose to have soil treated to LDR levels given in 3745-270-49 (alternative treatment levels for soils).

A facility is subject to the federal SPCC regulations (40 CFR 112) if it is non-transportation related (e.g. fixed) and has an aggregate above ground storage capacity greater than 1,320 gallons or a total underground storage capacity greater than 42,000 gallons of oil (including used oil), and there is reasonable expectation of a discharge to navigable waters.

2. Inspectors can check BUSTR's web-site at https://www.comapps.ohio.gov/airfire_apps/bustr/air/PUBLICQUERY.asp to determine if a UST containing used oil is registered with BUSTR. Inspectors may call BUSTR at 614-772-7938 or a BUSTR site coordinator to report an unregistered UST or a UST that appears to not be in compliance with OLCFP regulations. A list of BUSTR coordinators by county are at:
