Dear Ms. Viken:

Thank you for accompanying Andy Maneff and me during Ohio EPA's March 15, 2011 inspection of Toxco Inc.'s (Toxco's) facility in Lancaster, Ohio. We inspected Toxco to determine its compliance with Ohio's hazardous waste laws and rules as found in Chapter 3734. of the Ohio Revised Code (ORC) and Chapter 3745. of the Ohio Administrative Code (OAC). Toxco was also inspected for compliance with the terms and conditions of its hazardous waste facility installation and operation permit issued December 21, 2005, as modified. Our inspection included a review of company operations and written documentation.

At the time of the inspection, Toxco was operating as a permitted hazardous waste storage facility, a large quantity generator (LQG) of hazardous waste, and a large quantity handler of universal waste. During the inspection, we found the following violation of Ohio's hazardous waste rules.

**OAC Rule 3745-52-34(A)(3), Accumulation time of hazardous waste:** While being accumulated and/or treated on site, each container and tank must be labeled or marked clearly with the words "Hazardous Waste."

At the time of the inspection, the Gaylords being used to accumulate the hazardous waste lead plates destined for Korea were not labeled or marked clearly with the words "Hazardous Waste."

During the inspection, Toxco staff added the words "Hazardous Waste" to the Gaylord labels and re-labeled all of the containers being used to accumulate the hazardous waste lead plates destined for Korea. The violation was abated at that time.

**General Comments:**

1. As discussed during the inspection, the KOH waste water that is not discharged to the POTW is sent to Vickery Environmental, Inc. with the facility's retort waste water once every 90 days. Thus, the KOH tank is completely emptied at least once every 90 days. During the inspection, the KOH tank was dated "11/2/2010" instead of "1/17/2011." Please ensure that the accumulation start date marked on the KOH tank coincides with your tank inventory records documenting when it was emptied to avoid any confusion in the future.
2. Toxco has been storing hazardous waste drums of lead oxide in Phase 2 for more than a year. OAC Rule 3745-270-50(C) states that an owner or operator of a treatment, storage, or disposal facility may store such wastes beyond one year; however, the owner or operator bears the burden of proving that such storage was solely for the purpose of accumulation of such quantities of hazardous waste as are necessary to facilitate proper recovery, treatment, or disposal.

As discussed during the inspection, Toxco used to send its lead oxide drums to Exide Technologies (IN and PA) and a few drums to Korea. Exide shut down and could not take them anymore. Likewise, Korea did not want them anymore, and Toxco could not find anywhere to send them. Recently, Toxco has contracted with Sanders Lead to accept them and is currently preparing the backlog of drums for shipment. Two loads have already been sent there. Toxco anticipates that sending two more loads by the end of April should bring them back within the one year storage prohibition time frame. As such, Ohio EPA will revisit this issue during our next inspection.

## PROCESS DESCRIPTION SECTION

Give a general process description (include all processes at the facility)

Toxco, Inc. is a destination facility for nickel cadmium (NiCd) and lead acid batteries. Toxco received a hazardous waste storage permit on December 21, 2005. Toxco is also a large quantity universal waste handler (LQUWH) in addition to a large quantity generator (LQG) of hazardous waste.

Toxco has five main processing areas – the NiCd breaking area, two lead acid breaking areas (manual and automated line), the retort/recovery furnace, and a battery sorting area. Toxco also has installed other pieces of equipment throughout the facility that are used to aid in the recycling process. Currently, Toxco is processing NiCd batteries and lead acid batteries. When batteries arrive at the facility, they are weighed, tagged, and logged. The batteries are also visually inspected per the facility's waste analysis plan. Once labeled, the batteries are brought into either their respective storage areas (phase I for unsorted sealed and dry cell materials, phase II for acid, phase III for alkali) or to the staging area located in phase III.

In general, the batteries are then moved into their respective breaking areas where they are processed. The hardware is removed and recycled as stainless steel. The facility cracks the batteries, and the plates are pulled and sent off site to be recycled. The battery cases are washed and placed into the granulator. The granulated material is placed into the 40-yard hazardous waste roll off box or sent off site to be recycled.

In addition, Toxco installed a dehusker, dust collector, muffin monster, and barrel crusher in Building 1. The dehusker removes plastic cases that enclose intact battery cells. The plastic cases are cracked allowing the intact battery cells to be separated from the plastic case for the purpose of recycling. The muffin monster is used to shred sintered nickel and sintered cadmium plates. The shredded material is then accumulated and used as feedstock in the retort furnaces. The dust collector (baghouse) is used to reduce the potential atmospheric emissions of particulate matter that may be generated during operation of the muffin monster and dehusker. The barrel crusher is used to compact empty metal barrels, which are then managed as scrap metal.

In Building 2, Toxco has installed a cadmium plate shredder line and cadmium treatment system. The plate shredder is operated to process steel electrode pocket plates containing cadmium oxide from NiCd batteries. In addition, Toxco has installed and is now operating an automated battery breaking process line for lead acid batteries.

Toxco uses retort furnaces to recover nickel and cadmium from dry cell batteries and plates separated from batteries in the alkali breaking area. The recovered cadmium and nickel are collected and sold as scrap metal.

The facility also operates as a Large Quantity Universal Waste Handler (LQUWH) for other types and chemistries of batteries.

The facility generates several waste streams, including polycarbonate plastic, PPE, retort wastewater, potassium hydroxide, lead plates, lead oxide, polypropylene plastic, lead absolyte

plates, metallics, and plastic lead separators. Toxco also generates spent fluorescent bulbs, a sulfuric acid effluent which is neutralized on site, and a nonhazardous filter cake.

### **WASTE ACTIVITIES AND P2 SUMMARY SECTION**

For each of the processes listed above that generate a waste give the following information: (1) name of process generating waste, (2) name or description of waste generated (e.g. sludge, solvent, ash, used oil, spent lamps, etc.), (3) EPA waste codes, if applicable, (4) quantity generated per month, (5) type of accumulation (container, tank, etc.) (6) waste accumulation location in facility, (7) type of on-site treatment (if used), (8) name of off-site management facility and type of waste management activity occurring there, (9) Current P2 activities, and (10) P2 opportunities.

In 2010, Toxco received and processed approximately 1.5 million pounds of universal waste batteries for metals recovery (retorting) and 38.8 million pounds of universal waste batteries for other recycling (battery breaking) based on the facility's 2010 Annual Report.

**Polycarbonate plastic** - This plastic is generated from the battery cases of the lead acid batteries (manual process). The plastic is ground and placed in a 40-yard roll off box located in a truck bay. The PPE is also added into this roll off box. The waste carries D006 and D008 waste codes. The facility generates a roll off box containing plastic and PPE every week. In the past, it has been sent to EQ Detroit (Michigan Disposal Waste Treatment Plant) for stabilization or chemical fixation prior to disposal at another site (H111). Recently, Toxco has started sending this waste to Envirosafe in Oregon, Ohio.

**PPE** - The PPE is generated from changing an employee's PPE for a break or at the end of a shift. The PPE is accumulated in the 40-yard roll off box with the polycarbonate plastic. The waste carries a D006 and D008 waste code. It is sent to either EQ Detroit or Envirosafe. In 2010, Toxco shipped approximately 1.28 million pounds of polycarbonate plastic and PPE off site.

**Retort waste water** - The retort wastewater is generated from the retort furnaces. The dry cell NiCd batteries contain hydroxide and when they are heated it comes off and is collected in the 2,500 gallon wet scrubber tank. Any plastic in these batteries also goes to the wet scrubber tank. Toxco generates approximately 2,500 gallons of retort wastewater every 90 days. The waste carries a D006 waste code. Due to the level of phenols in this waste, it is sent to Vickery Environmental, Inc. for deepwell or underground injection (H134). In 2010, Toxco generated approximately 16,000 gallons of this waste stream.

**Potassium hydroxide** - The potassium hydroxide (KOH) is generated from processing the NiCd batteries. The KOH is collected in a 2,500 gallon tank, which is located inside the east side of the alkali battery recycling area. The waste carries D002 and D006 waste codes. Some of the KOH can be incorporated into the onsite WWTU and then discharged to the POTW. The KOH that is not discharged to the POTW is sent to Vickery Environmental, Inc. with the retort waste water. In 2010, Toxco generated approximately 100,000 gallons of this waste stream.

**Lead plates** - The lead plates are generated from the lead acid batteries (manual process). The lead plates carry a D008 waste code. The lead plates are collected and placed in stacks on a spill collection mat in phase I or II of the storage areas. The lead plates are left on site in stacks

for a couple of weeks while they continue to drain. Toxco sends two to three truckloads of lead plates off per day. The lead plates are sold to both domestic and foreign customers to be recycled.

**Lead oxide** - The lead oxide is generated from the filter cake in the lead acid processing area (manual process). The lead oxide is collected in 55-gallon drums located in the phase I or II of the storage area. The lead oxide carries a D008 waste code. The facility ships two to three shipments of lead oxide per week. This waste stream is also sold to customers to be recycled.

**Polypropylene plastic** - The polypropylene plastic is generated from the battery cases. The plastic is ground and sold as a product to be used to make buckets. A truckload of plastic is sent by manifest about every other month. The plastic carries a D008 waste code. In 2010, the facility shipped approximately 283,000 pounds of this waste off site for reclamation.

**Lead absolyte plates** - The lead absolyte plates are generated from the manual breaking process. This waste stream is irregular. The waste carries a D008 waste code. The waste is collected and sent by manifest off site.

**Fluorescent bulbs** - The fluorescent bulbs are generated when they are changed out. The bulbs are sent to Baltimore, Ohio, to go on to a recycler.

**Sulfuric acid effluent** - This effluent is generated from the lead acid battery breaking processes. It is neutralized in Toxco's on site wastewater treatment system and then discharged to the City of Lancaster POTW.

**Filter cake** - Nonhazardous magnesium sulfate filter cake is generated from the wastewater treatment system. It is sent off site for disposal at a solid waste landfill (Republic landfill).

**Waste from the Automated Line** - Toxco also operates an automated battery breaking process for lead acid batteries. Four waste streams are generated from this operation. From the first screw, Toxco generates lead oxide sludge, which is classified as an exempt sludge; it is sent to a smelter. Toxco generates a metallics waste stream from the second screw, which is managed as hazardous waste (D008) and also sent to a smelter. The materials from the first two screws are accumulated in gaylords; about 15-20 gaylords are filled each day the line is operating. From the third screw, polypropylene plastic is generated and managed as hazardous waste (D008). About 90% of this material is recycled, and Toxco fills about 3 super sacks per day with this plastic. Lastly, Toxco generates plastic lead separators from the automatic line which are managed as hazardous waste (D008) and accumulated in the hazardous waste roll-off box, which is sent to EQ Detroit or Envirosafe for disposal. Sulfuric acid effluent is being collected and routed to the facility's wastewater treatment system. Overflow is collected in two less than 90-day accumulation tanks prior to treatment.

**Additional P2 remarks and information:**

Based on Toxco's May 2009 Waste Minimization Report:

1. In 2005, Toxco installed a new wastewater treatment system, which allows the acid electrolyte to be neutralized, filtered, and discharged to the Publicly Owned Treatment Works (POTW)

operated by the City of Lancaster Water Pollution Control Board instead of being shipped off-site as hazardous waste. Magnesium sulfate filter cake media generated from the on-site wastewater treatment system is shipped off-site as a non-hazardous waste to an approved landfill.

2. Rather than collecting the alkaline solution from the NiCd battery breaking area and shipping it off-site as a corrosive cadmium-containing hazardous waste, Toxco is evaluating a process to co-neutralize alkaline and acid electrolytes, extracting cadmium from the resulting characteristic sludge. The pretreated water will be discharged to the POTW.
3. Toxco is also evaluating processing the wastewater/condensate from retort furnaces and associated air scrubbers installed in 2006. Currently, the wastewater is accumulated as a hazardous waste and shipped off-site. The process will involve pre-filtering the wastewater to remove trace organics, neutralization and precipitation of cadmium to form a characteristic sludge, feeding the sludge through retort furnaces, and discharging resulting processed wastewater to the POTW.
4. In August 2006, Toxco began shipping polypropylene cases to be reclaimed off-site. The facility is currently looking for a direct consumer for the granulated plastics (polycarbonate and propylene), making the waste plastic an excluded recyclable material. The direct consumer will have to be able to process the recyclable plastic directly to make a finished good without first reclaiming it.

The next waste minimization report is due in May 2011.
