Mr. Kenneth Legner, Environmental Engineer
Kenworth Truck Company
PO Box 2345
65 Kenworth Drive
Chillicothe, OH 45601

Dear Mr. Legner:

On January 23, 2013, Ohio EPA inspected Kenworth's Chillicothe facility to determine Kenworth's compliance with Ohio's hazardous waste laws as found in Chapter 3734 of the Ohio Revised Code (ORC) and Chapter 3745 of the Ohio Administrative Code (OAC). This letter will explain the violations I found, what you need to do to correct the violations, other general concerns we have, what you need to do to respond to my general concerns and any pollution prevention opportunities I identified.

I found the following violations of Ohio's hazardous waste laws:

- (1) OAC Rule 3745-273-14(A), Labeling/Marking Standards for Small Quantity Generators of Universal Waste:** Each battery or container of batteries must be labeled with the words "Universal Waste-Batteries" or "Waste Batteries" or "Used Batteries".

An unlabeled container of batteries was observed during the inspection. Kenworth labeled the container during the inspection, therefore, this violation has now been abated.

GENERAL COMMENTS

- A. Since the last inspection, Kenworth has closed the "dirty solvent" (D001) tank that was part of a solvent still located in the Hazardous Materials Building. The tank was a "generator" tank (held hazardous waste for ninety days or less) that had not been used since 2009 and was permanently retired in 2011. At that time, the tank was inspected and sent offsite to a scrap metal recycler. If you have documentation (sales agreement, shipping papers, photos, etc.) of the final destination of the tank, please submit a copy to me. It appears from your description that there was no secondary containment for the tank, which was located on a concrete floor. Because the floor of this building, which is used for less-than-ninety day accumulation of Kenworth's hazardous waste, has not yet been closed, Kenworth

must decontaminate the floor when it either closes the building or it is no longer in use. Note that because Kenworth is constantly modifying the facility, necessitating the occasional closure or relocation of less-than-ninety day accumulation areas, it is important that you understand, comply with and document these closures when they do occur.

- B. Several years ago, Kenworth installed new robotic paint lines in the facility, resulting in an increase in the length and extent of cleaning lines and huge increase in the volume of spent solvent generated. Should Kenworth wish to have a Pollution Prevention Assessment of this painting activity conducted by the Ohio EPA's Office of Compliance Assistance and Pollution Prevention, please contact them at 1-800-329-7518.

Enclosed, you will find a copy of the checklists that were completed as a result of the inspection. You can find copies of the rules and other information on the division's web page at <http://www.epa.state.oh.us/dhwm>. If you have any questions, please contact me by telephone at (740) 380-5293 or by e-mail at donna.goodman@epa.state.oh.us.

Sincerely,

Donna Goodman

2. Inspectors can check BUSTR's web-site at https://www.comapps.ohio.gov/sfm/fire_apps/bust/bustr/PublicInquiry.asp to determine if a UST containing used oil is registered with BUSTR. Inspectors may call BUSTR at 614-752-7938 or a BUSTR site coordinator to report an unregistered UST or a UST that appears to not be in compliance with BUSTR regulations. A list of BUSTR coordinators by county are at: https://www.comapps.ohio.gov/sfm/fire_apps/bust/bustr/SearchByCounty.asp.

REMARKS GENERAL INFORMATION

General Process Information:

Kenworth Truck Company manufactures custom ordered class 8 diesel trucks. At the time of the inspection, Kenworth was producing 120-130 trucks per day, operating three shifts including weekends. The number of employees is around 2200. Kenworth receives virtually all components from other industries and assembles the trucks on a moving rail system.

The assembled truck chassis, truck cabs and sleeper cabs are painted in one manual cab paint booth, four robotic cab paint booths and a manual chassis paint booth. The chassis and cab paint booths employ a water wash downdraft system to capture excess paint suspended in the air. Wastewater from this system enters Kenworth's pretreatment system and is discharged to the Chillicothe POTW under a permit from the city. Kenworth also has three touch-up paint booths and a small spot priming booth. These employ paint booth filters which are disposed of as a D006/D008 waste.

Kenworth manages its spent solvents in two ways: A) it sends some to a TSD that distills it and sends it back to Kenworth via a commercial distributor or B) it is fuel blended.

Kenworth has one main < 90 day storage area ("Haz Mat Storage Bldg") located in an outbuilding. All hazardous waste from the plant is relocated to this building prior to being shipped offsite. At the time of the inspection, Kenworth also had numerous SAAs and < 90 day accumulation areas in the main plant building, including the following less than ninety day areas for waste paint/solvents: the bulk storage room, cab booth #3 day room, chassis booth day room, paint mix room, outside chassis booth day room, the robot waste cabinet/room. Waste adhesive is being accumulated and waste adhesive at column F-1 north, column D-3, column D-5 west, and column B-11 north. Numerous other areas serve as collection points for spent gloves and used oils.

Regulatory/Enforcement History (if applicable):

Kenworth was last inspected on 6/23/2009. The company is nearing the end of a cleanup which was under orders with the Division of Emergency and Remedial Response to remediate groundwater contamination which occurred as a result of past leaks in a former underground tank farm. The remedy for benzene, toluene and xylene contamination was originally a pump and treat system but was later changed to monitored natural attenuation.
