Mr. Ron Rowe
Rowe Collision
7709 West Rowe Avenue
Toledo, Ohio 43617

Dear Mr. Rowe:

Thank you for accompanying Melissa Boyers and me during the Ohio Environmental Protection Agency's (Ohio EPA's) August 3, 2010, hazardous waste compliance evaluation inspection of Rowe Collision located in Toledo, Ohio. I inspected Rowe Collision to determine its compliance with Ohio's hazardous waste laws as found in Chapter 3734 of the Ohio Revised Code (ORC), and Chapter 3745 of the Ohio Administrative Code. Pollution prevention options were also discussed during this inspection. This letter will explain the violations found and what you need to do to correct these violations.

Rowe Collision specializes in body repair and painting of vehicles. Wastes generated include used oil and antifreeze which are recycled, paint/solvent sludge or "pucks" from the gun wash/solvent still (D001, D035, F003, F005) and lead acid batteries which are exchanged. Rowe Collision also generates paint booth filters from two paint booths which are managed as a solid waste.

At the time of my inspection, Rowe Collision was operating as a conditionally exempt small quantity generator (CESQG) of hazardous waste.

I found the following violations of Ohio's hazardous waste and used oil laws. In order to correct these violations you must do the following and send me the required information within 30 days of your receipt of this letter:

1. Waste Evaluation, OAC Rule 3745-52-11:

Any person who generates a waste must determine if that waste is a hazardous waste by using generator knowledge or by testing the waste.

Mr. Ron Rowe
August 12, 2010
Page 2

At the time of the inspection, Rowe Collision did not have waste evaluation documentation for the spent paint booth filters from either of the two on-site paint booths. Rowe Collision has historically disposed of this spent material as a non-hazardous waste. Rowe Collision must immediately cease disposing of the waste paint filters as non-hazardous waste until a proper waste evaluation has been completed.

Rowe Collision must obtain a representative sample of the spent paint booth filter waste stream from the downdraft booth and have it analyzed for Toxic Characteristic Leaching Procedure (TCLP) Resource Conservation and Recovery Act (RCRA) metals (SW-846 Method 1311/6010) and volatile organics (SW-846 Method 1311/8260). To abate this violation, Rowe Collision must submit a copy of the analytical results to Ohio EPA. Once analytical results have been reviewed, Ohio EPA will advise you on proper disposal options as well as plans for the future management of this waste stream.

Ohio EPA will review the submitted waste evaluation information and determine if there is a change in Rowe Collision's generator status. Additional violations may be cited based upon your determined generator status. You will be notified of any additional violations in a separate letter.

2. OAC Rule 3745-279-22(C)(1): Labeling:

Containers, aboveground tanks, and fill pipes used for underground storage tanks shall be labeled or marked clearly with the words "used oil."

Rowe Collision had three drums of used oil that were not properly labeled.

At the time of my inspection, Rowe Collision properly labeled all of the containers with the words "used oil". A copy of the fact sheet, The Regulation of Used Oil: An Overview for Ohio Businesses Who Generate Use Oil, was given to you at the time of my inspection. Please review this information and contact me if you have any questions.

Therefore, this violation is considered abated.

If you find ways to recycle, reduce or altogether eliminate the amount of waste that your company generates you may be able to reduce treatment and disposal costs. You may possibly reduce your regulatory requirements. Ohio EPA also has helpful information about pollution prevention at the following web address: <http://www.epa.ohio.gov/ocapp>.

Sincerely,

Wendy Miller
