**RE: CENTURY CONTAINER CORPORATION, COLUMBIANA COUNTY
NOTICE OF VIOLATION (NOV), RETURN TO COMPLIANCE (RTC)
OHR 000 175 919, COMPLAINT NUMBER 7585**

Dear Mr. Comes:

On February 21, 2013, I as a representative of the Ohio EPA Division of Materials and Waste Management, conducted an inspection of Century Container Corporation (Century Container) Plant No. 3 (as known as the "Lid Plant") at 101 E. Railroad St., Columbiana, Ohio, for compliance with Ohio's hazardous waste and used oil regulations. You, Bruce Jones and Jeff Bolen represented Century Container during that inspection.

The inspection was in response to a complaint received by Ohio EPA alleging mismanagement of oil soaked mats, presence of plastic pellets and regrind on the ground, discharge of oil from drains from between machines to the dock lot, and storing a 55 gallon drum of alcohol without a permit.

I walked the facility's property and did not observe any oil or plastic pellets and regrind on the ground. I observed a 55 gallon drum containing fresh unused isopropyl alcohol inside the building; no permit is required from Ohio EPA to store this drum.

Subsequent to the inspection Bruce Jones provided a copy of a new Purchase Order for collection of oily sorbent pads from beneath the injection machines by a used oil management company. Previous disposition of these pads is unclear. During the inspection I observed a 55 gallon drum reportedly intended for collecting used oily pads that had some trash in it. Disposal of used absorbent pads containing hydraulic oil in the trash is acceptable if no free liquids are present.

Facility representatives reported that used hydraulic oil is collected in totes owned by a used oil processor, sent to the processor and that reprocessed oil is returned to Century Container. I observed one of the subject totes partially full of used oil. A copy of a processing manifest for this oil was provided.

Century Container is a manufacturer of HDPE injection-molded containers in several sizes up to 6 gallons. Century Container also manufactures lids for these pails, also by injection-molding. Lid manufacturing is done at Plant No. 3.

The facility, Plant No. 3, receives plastic resin beads in gaylord boxes. The resin is conveyed to the injection-molding machines which form the lids and where dye is added if needed. The injection-molding machines use hydraulic oil and have integral hydraulic oil reservoirs and circulation systems. During operation some of the hydraulic oil leaks onto the concrete floor. I observed absorbent mats being used to absorb oil. I also observed some oil in the trenches located between the injection-molding machines. Most of the injection-molding machines had several pails of used hydraulic oil located nearby prior to transfer to the storage totes and eventual shipment to the used oil processor.

Facility representatives reported that the trenches located between the injection-molding machines did not have outlet pipes and that the accumulated oil is removed by vacuuming. Century Container collects used hydraulic oil (e.g., oil in the pails near the injection-molding machines) in totes provided by a company that processes the oil for re-use. Century Container also collects a mixture of used oil and water that is shipped to the same used oil processing company.

No painting or printing is done at this location.

Low flash mineral spirits is used on moistened rags and wipes to clean various items. Facility representatives reported that no free liquids were present from this usage. Used rags and wipes are placed in the trash. One parts washer using low flash mineral spirits solvent was located in the maintenance shop; reportedly it is seldom used and none of the facility representatives knew when the solvent had last been changed.

This letter identifies violations observed during the inspection and steps that must be taken to address those violations. Based on the facility documents reviewed and observations made during the facility walk-through, Ohio EPA has determined that Century Container has violated the following state used oil and universal waste regulations.

1. **OAC 3745-273-13(D)(1) Small quantity handler must contain lamps in proper containers or packaging and containers or packaging must be closed.**
2. **OAC 3745-273-14(E) Small quantity handler must label containers or packaging holding universal waste lamps.**
3. **OAC 3745-273-15(C) Small quantity handler must have demonstration for length of accumulation**

The facility generates used fluorescent lamps that it manages as universal waste and is classified as a small quantity handler of universal waste.

One box of used 8 foot fluorescent lamps, approximately 90 per cent full, was located in the maintenance shop. The box was not closed. The container of used fluorescent lamps was not labelled or marked with any of the following words "Universal Waste - Lamp(s)", "Waste Lamp(s)" or "Used Lamp(s)". No date was marked on the container.

These practices were not in compliance with the above cited regulations.

By e-mail dated March 1, 2013, Bruce Jones provided photos of this container closed and marked. These actions abated this violation. No further action regarding this violation is necessary at this time. In the future all used lamps should be stored in containers that are properly labeled or marked and closed.

4. OAC 3745-279-22(C)(1) Used oil containers and tanks must be labeled with the words "Used Oil"

Century Container collects used oil. I observed a tote of about 300 gallon capacity, partially full of used hydraulic oil, in the Plant No. 3 building. It was not labeled with the words "Used Oil". I observed numerous pails holding used oil near the injection molding machines. None were labeled with the words "Used Oil".

By e-mail dated March 4, 2013, Bruce Jones provided photos of the totes used to store used oil that were labeled with the words "Used Oil". He also reported that the practice of storing used oil in pails near the injection molding machines had been discontinued. These actions abated this violation. No further action regarding this violation is necessary at this time. In the future all used oil should be stored in containers that are labeled with the words "Used Oil".

Enclosed you will find a copy of the checklists completed during the February 21, 2013 inspection.
