NOV/RTC

Dear Mr. Robinson:

On June 30, 2010, I inspected the American Showa Inc. (American Showa) facility in Sunbury, Ohio, to determine American Showa's compliance with Ohio's hazardous waste laws and rules as found in Chapter 3734, of the Ohio Revised Code (ORC) and Chapter 3745 of the Ohio Administrative Code (OAC). The inspection included a review of company operations and written documentation.

At the time of the inspection, American Showa was operating as a large quantity generator (LQG) of hazardous waste, a small quantity handler of universal waste, and a used oil generator. During the inspection, I found the following violation of Ohio's hazardous waste rules:

1. **OAC Rule 3745-52-34(C)(1)(a), Satellite accumulation of hazardous waste:** A generator may accumulate as much as 55 gallons of hazardous waste or one quart of acutely hazardous waste in containers at or near any point of generation where wastes initially accumulate, which is under the control of the operator of the process generating the waste, without a permit and without complying with OAC Rule 3745-52-34(A), provided that the containers are closed, in good condition, and compatible with the wastes stored in them.

At the time of the inspection, the 55-gallon satellite drum by the chrome plating line, which is used to accumulate hazardous debris and PPE (D007), was not closed.

- During the inspection, American Showa properly closed the 55-gallon satellite drum used to accumulate hazardous debris and PPE from the chrome plating lines. The violation was abated at that time.

General Comments:

As noted during my review of the facility's contingency plan, it may be helpful to add a diagram to the plan that illustrates the location of each piece of emergency equipment throughout the facility to aid responders in the event the plan is implemented. The current contingency plan only contains a general narrative description of emergency equipment locations.

PROCESS DESCRIPTION SECTION

Give a general process description (include all processes at the facility)

American Showa Inc., whose parent company is Showa Japan, manufactures shock absorbers for Harley Davidson motorcycles, Honda (and some Mitsubishi) automobiles, and Yamaha and Kawasaki four-wheelers. Most of the shocks are made from steel; however, aluminum is used for some Harley parts. Parts are fabricated on nine machining lines (4 dry, 5 wet processes) and 2 welding lines. The company has four chrome plating lines where parts (i.e., inside rods) are plated. Some of the parts or components are painted in an electro-deposition process on the paint line. American Showa also performs sintering and stamping of some metal parts and has a spring line. In addition, American Showa has recently added a powder painting line; however this painting process does not generate any hazardous waste. After parts are formed, welded, plated (if applicable), and painted, they are assembled into finished products on the assembly lines. In addition, the company no longer manufactures pinion shafts, but has recently started making and painting power steering parts for another American Showa plant (Blanchester, Ohio).

Two wastewater pretreatment systems are maintained at the facility, one for the treatment of chrome wastewater and the other for the treatment of other plant wastewaters (e.g., water-based cleaning solvents). The effluents from both systems are discharged to the Sunbury WWTP. A maintenance shop is available for equipment maintenance, QC laboratory equipment is used for process control, and a clean room has been constructed for assembling certain internal components (e.g., valves) for the shocks. Showa also has a R&D facility at the Sunbury location.

The Sunbury plant is the corporate office for American Showa, although the company also operates plants in Blanchester, Ohio, and Los Angeles, California.

WASTE ACTIVITIES AND P2 SUMMARY SECTION

For each of the processes listed above that generate a waste give the following information: (1) name of process generating waste, (2) name or description of waste generated (e.g. sludge, solvent, ash, used oil, spent lamps, etc.), (3) EPA waste codes, if applicable, (4) quantity generated per month, (5) type of accumulation (container, tank, etc.) (6) waste accumulation location in facility, (7) type of on-site treatment (if used), (8) name of off-site management facility and type of waste management activity occurring there, (9) Current P2 activities, and (10) P2 opportunities.

In the chrome plating operation, the company generates spent chromic acid solution, chrome-contaminated PPE, and filter media from the air scrubber. The chromic acid solution is accumulated in plastic drums and carries waste codes D002 and D007. This material is shipped to Inmetco in Pennsylvania for metals recovery. The contaminated PPE and filter media carry waste code D007, and these wastes are shipped to Ross Incineration.

Treatment of the wastewater from the chrome plating operation prior to discharge to the village of Sunbury results in the generation of F006 sludge. It is accumulated in plastic lined Gaylord boxes and shipped to EQ Michigan Disposal in Michigan where it is landfilled. In 2009, American Showa generated 12,127 pounds of F006 sludge.

In the painting process, paint waste generated includes selenium-contaminated waste paint from the electro-deposition painting line (D010); flammable paint cans and debris (D001); and

ultrafilter cleaner (D001). In addition, solvent-based paint markers are used throughout the plant to mark parts. When these markers become damaged and still contain solvent-based paint, they are managed as D001 hazardous waste. American Showa also generates paper towels contaminated with MIBK (D001, F003), which are handled as hazardous waste. Finally, the company sometimes generates used adhesive containers, which are flammable (D001) wastes. Most of these hazardous wastes are accumulated in satellite accumulation containers throughout the plant before being moved to the less than 90-day accumulation area. All of these hazardous wastes are shipped off site to Ross Incineration.

Other wastes generated at the site include used oil, which is accumulated in a 4,000-gallon tank and then managed by United Waste Water Services. Universal waste batteries are accumulated on site and then sent to Battery Solutions in Michigan. Currently, Showa contracts with a lighting service to replace its fluorescent bulbs, but is looking into sending its spent bulbs to Michigan too (No universal waste lamps were being accumulated on site at the time of my inspection). Scrap metal, including empty aerosol cans, is sent to Ross Brothers in Mount Vernon or Sims Brothers in Marion for recycling. In addition, all of the facility's scrap plastic (both soft and hard) is recycled. Any cloth rags that are used at the facility are sent off site to be laundered, and thus are not considered hazardous wastes.

At the time of the inspection, American Showa was operating as a large quantity generator (LQG) of hazardous waste. The company's less than 90-day accumulation area is located inside the plant along the central portion of the east wall of the facility. There are several satellite accumulation areas throughout the plant, including a drum for chrome-contaminated PPE by the plating line and drums for paint waste, paint markers, and paper towels by the electro-deposition painting line.

GENERATORS, COLLECTION CENTERS AND AGGREGATION POINTS**

NOTE: 1. A facility is subject to the federal SPCC regulations (40 CFR 112) if it is non-transportation related (e.g., fixed) and has an aggregate above ground storage capacity greater than 1,320 gallons or a total underground storage capacity greater than 42,000 gallons of oil (including used oil), and there is reasonable expectation of a discharge to navigable waters.

2. Inspectors can check BUSTR's web-site at https://www.comapps.ohio.gov/sfm/fire_apps/bust/bustr/PublicInquiry.asp to determine if a UST containing used oil is registered with BUSTR. Inspectors may call BUSTR at 614-752-7938 or a BUSTR site coordinator to report an unregistered UST or a UST that appears to not be in compliance with BUSTR regulations. A list of BUSTR coordinators by county are at:

https://www.comapps.ohio.gov/sfm/fire_apps/bust/bustr/SearchByCounty.asp.
