Dear Mr. Anderson:

Thank you for accompanying me during Ohio EPA's October 9, 2008, inspection of Quality Distribution's Quala Systems, Inc. facility in Delaware, Ohio. I inspected the facility to determine its compliance with Ohio's hazardous waste and used oil laws and rules as found in Chapter 3734. of the Ohio Revised Code (ORC) and Chapter 3745. of the Ohio Administrative Code (OAC). During the inspection, I also helped you identify ways to prevent pollution by reducing waste.

At the time of the inspection, Quality Distribution was operating the facility as a large quantity generator (LQG) of hazardous waste and a used oil generator. During the inspection, I found the following violation of Ohio's used oil rules.

***OAC Rule 3745-279-22(C)(1), Used oil storage requirements for generators:***  
Containers and aboveground tanks used to store used oil at generator facilities must be labeled or marked clearly with the words "Used Oil."

At the time of my inspection, Quality Distribution was storing its used oil in a 300-gallon container that was not labeled or marked clearly with the words "Used Oil."

During the inspection, Quality Distribution marked the used oil container in the maintenance shop with the words "Used Oil." The violation was abated at that time.

#### General Comments

1. As discussed during the inspection, it is important to know the EPA waste codes that apply to your waste because these codes identify the specific types of waste generated at your facility. You can find the specific waste codes in OAC Rules 3745-51-21 through 3745-51-33. These rules are available on the Internet at: <http://www.epa.state.oh.us/dhwm/rules.htm>. In the future, please work with Clean Harbors to ensure that the waste codes noted on the hazardous waste manifest are indeed the correct codes.

Ted Strickland, Governor  
Lee Fisher, Lieutenant Governor  
Chris Korleski, Director

2. As we discussed, if you are managing a hazardous waste that is excluded or exempted from regulation as a hazardous waste, that exemption or exclusion must be documented in your facility's records in accordance with the land disposal restrictions (LDR) requirements in OAC Rule 3745-270-07(A)(7). The wastewater generated in the tanker cleaning process may be hazardous waste, but is exempted from regulation as such because it is treated in the wastewater pretreatment system. Although the "Discharge Report," as discussed, may meet the applicable LDR requirements, it may be helpful to place a separate notice regarding this waste stream in your files. See the attached LDR rule language for notice requirements.
  
3. As discussed during the inspection, Quality Distribution drains and crushes its used oil filters. These filters are then managed as solid waste. Although this is acceptable, Ohio EPA encourages you to recycle your filters as scrap metal. Ohio EPA's Office of Compliance Assistance and Pollution Prevention maintains a list of Oil Filter Recycling and Transportation Services for Ohio and other States at:  
<http://www.epa.state.oh.us/opp/recyc/oiltrans.html>.

If you would like a free, non-regulatory on-site pollution prevention assessment or if you would like more information about pollution prevention, please contact Ohio EPA's Office of Compliance Assistance and Pollution Prevention at (800) 329-7518 or visit <http://www.epa.state.oh.us/ocapp/ocapp.html>.

Enclosed you will find a copy of the checklists that I completed as a result of the inspection. Should you have any questions, please feel free to call me at (614) 728-3887. You can find copies of the rules and other information on the division's web page at: <http://www.epa.state.oh.us/dhwm/>.

**PROCESS DESCRIPTION SECTION**

Give a general process description (include all processes at the facility)

Quala Systems, Inc. operates a tanker truck maintenance and cleaning facility at 1200 South Houk Road in Delaware, Ohio. PPG is the company's main customer; 85-90% of the tankers serviced have hauled resins or other products or hazardous waste from PPG's Delaware, Circleville, and Cleveland facilities. Other chemicals and products are also hauled by the tankers serviced at the facility. The tankers range in size from 5,000 to 7,000 gallons.

The cleaning process begins with the removal of residual material or "heels" from the tanker. If there is more than 5 gallons of heel left or if the tanker is not considered RCRA-empty, the company whose product was hauled is contacted, and the material is returned, unless it is declared a waste. After the heel is removed, the tanker may be flushed with glycol ether to remove residual material before the interior is cleaned. Depending on the material previously in the tanker, it undergoes a final wash using caustic soda that may contain stripper, deionized water, or variety of soap products. The company generates and ships about 5-15 drums of hazardous waste (D001) every two months from this process. On average, 8 tankers are cleaned per day.

The company also operates a pretreatment system for the wastewater generated with a discharge to the city of Delaware sewer system and sludge being collected in a lined hopper. The sludge is nonhazardous (analyzed annually) and is hauled by Republic Services to Pine Grove landfill. Quala Systems also does service and repair work on trucks in the maintenance shop, which results in the generation of used oil, antifreeze, and batteries. One small parts washer unit filled with SK premium gold solvent (150 degree flash point) is also used in this area.

**WASTE ACTIVITIES AND P2 SUMMARY SECTION**

For each of the processes listed above that generate a waste give the following information: (1) name of process generating waste, (2) name or description of waste generated (e.g. sludge, solvent, ash, used oil, spent lamps, etc.), (3) EPA waste codes, if applicable, (4) quantity generated per month, (5) type of accumulation (container, tank, etc.) (6) waste accumulation location in facility, (7) type of on-site treatment (if used), (8) name of off-site management facility and type of waste management activity occurring there, (9) Current P2 activities, and (10) P2 opportunities.

**Hazardous waste:** The heels removed from the tankers and the glycol ether flush material are collected in 55-gallon drums and managed as hazardous waste (D001). Quala Systems generates and ships about 5-15 drums of hazardous waste off site every two months. All of the hazardous waste is transported by Clean Harbors to Spring Grove Resource Recovery, Inc. in Cincinnati, Ohio, for fuel blending. There is a less than 90-day hazardous waste accumulation area on the south side of the tanker wash building. There is also one satellite accumulation drum for the heel material inside the tanker wash building.

**Wastewater:** The company operates a pretreatment system for the wastewater generated from the process, which is then discharged to the city of Delaware sewer system. Wastewater treatment sludge is being collected in a lined hopper. The sludge is nonhazardous (analyzed annually) and is hauled by Republic Services to Pine Grove landfill.

**Used oil:** Used oil is generated in the maintenance shop and is burned on site in a space heater (3500 BTU/hour). Used oil filters are drained and crushed. The used oil is stored in a 300-gallon container prior to being burned.

**Used antifreeze:** Antifreeze is generated in the maintenance shop and is sent off-site as nonhazardous waste.

**Spent parts cleaning solvent:** Quala Systems has a parts washer in the maintenance shop that uses nonhazardous mineral spirits (SK premium gold solvent). When the mineral spirits are spent, they are mixed with the used oil and burned on site in the space heater.

**Lead acid batteries:** Spent lead acid batteries are sent to Interstate Battery.

There were not any fluorescent bulbs on site during the inspection, but an outside company services the lights when needed.
