CEI - NOV

Dear Mr. Wise:

On September 24, 2009, Ohio EPA, Division of Hazardous Waste Management (DHWM) conducted a compliance evaluation inspection (CEI) at the Mettler-Toledo, Inc. (MTI) facility located at 6600 Huntley Road, Columbus, Ohio to determine the facility's compliance with Ohio's regulations as found in Chapter 3734. of the Ohio Revised Code and Chapter 3745. of the Ohio Administrative Code (OAC). At the time of the CEI, MTI was represented by you and Mr. Jack Carney and I represented Ohio EPA. The CEI consisted of an inspection of facility operations and a review of associated documentation. During the CEI, we also discussed that MTI could puncture and hot drain their used oil filters and possibly arrange to market them as scrap metal (See Used Oil Enclosure).

Based on the results of the CEI, it has been determined that MTI has violated the following OAC rules:

1. ⁶⁶⁶⁻⁷⁴ **OAC Rule 3745-52-34(D)(2), Accumulation Time of Hazardous Waste:**
The owner of operator must inspection areas where containers of hazardous waste are stored, at least weekly, looking for leaks and for deterioration caused by corrosion or other factors. The owner or operator must record the inspections in an inspection log or summary.

Ted Strickland, Governor
Lee Fisher, Lieutenant Governor
Chris Korteski, Director

Although MTI personnel work near and/or review the area where the <180 day hazardous waste accumulation shed is located frequently, no specific inspections or inspection logs have been completed during the past three (3) years.

MTI must immediately begin completing inspections of the <180 day hazardous waste accumulation area on at least a weekly basis. These inspections must meet the intent of the associated rule. Please be advised that the term "weekly" has been determined to mean once at least every seven (7) days. A log of the results of the inspections should be maintained for at least three (3) years from the time of the inspection. MTI must provide to this office for review a copy of recently completed inspection logs and a description of the actions taken for implementation and continuation of the inspections.

2. **OAC Rule 3745-52-34(D)(4), Accumulation Time of Hazardous Waste:** A small quantity generator of hazardous waste may accumulate and/or conduct treatment of hazardous waste that is generated on-site without an Ohio hazardous waste permit, provided that the date upon which each period of accumulation and/or treatment begins is clearly marked and visible for inspection on each container.

At the time of the CEI, there were two (2) containers of F003, F005 coded hazardous waste in the <180 day accumulation shed. Only one (1) of the containers located in the shed was marked with the accumulation start date. As this is a very small shed and hazardous waste is regularly shipped off-site, the 180 day accumulation time frame is not a concern at this time.

MTI must immediately mark the container of F003, F005 coded hazardous waste with the accumulation start date. MTI must provide to this office for review evidence that the accumulation start date was marked on the container. MTI must also provide a description of the actions taken to prevent this omission in the future.

3. **OAC Rule 3745-273-13(D)(1), Waste Management Standards for Small Quantity Handlers of Universal Waste:** A small quantity handler of universal waste must contain any lamp in containers or packages that are structurally sound, adequate to prevent breakage, and compatible with the contents of the lamps. Such containers must remain closed and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

Even though MTI had their spent fluorescent light bulbs in containers, the containers were not closed and some of the bulbs extended beyond the ends of the containers and would be susceptible to breakage.

MTI must immediately place all spent fluorescent bulbs in containers that are capable of being closed and that will encase the entire spent bulb. MTI must provide to this office for review evidence that the bulbs are now properly containerized and a description of the actions taken to assure compliance with this rule in the future.

4. **OAC Rule 3745-273-14(A), Labeling/Marking – Standards for Small Quantity Handlers of Universal Waste:** Universal waste batteries (i.e., each battery), or a container in which the batteries are contained; must be labeled or marked clearly with any one of the following phrases: "Universal Waste – Battery(ies)," or "Waste Battery(ies)," or "Used Battery(ies)."

MTI placed their universal waste batteries in plastic containers prior to off-site recycling. As these batteries did not show any evidence of breakage, spillage, and/or leakage, closing of these containers was not requirement. None of the containers were marked or labeled with any of the phrases stipulated by this rule.

MTI must immediately mark the containers used for management of the universal waste batteries with one of the phrases specified by this rule. MTI must provide to this office for review evidence that all of the containers used for management of the universal waste batteries have been appropriately labeled. MTI must also provide a description of the actions taken to assure the proper labeling of these containers in the future.

5. **OAC Rule 3745-273-14(E), Labeling/Marking – Standards for Small Quantity Handlers of Universal Waste:** Each lamp or a container or package in which such lamps are contained must be labeled or marked clearly with one of the following phrases: "Universal Waste – Lamp(s)," or "Waste Lamp(s)," or "Used Lamp(s)."

MTI placed their spent fluorescent light bulbs into containers prior to off-site recycling. These containers were not labeled as specified by this rule.

At the time of the CEI, the containers used for management of the spent fluorescent light bulbs were appropriately labeled. But as some of the bulbs were too long to allow for the containers to be closed, other containers would have to be used and appropriately marked or labeled. Please provide to this office for review evidence that all containers used for management of the spent fluorescent light bulbs have been marked or labeled as specified by this rule. MTI must also provide a description of the actions taken to assure compliance with this rule in the future.

Please submit all requested documentation to my attention at the letterhead address within thirty (30) days of receipt of this letter.

FACILITY, PROCESS DESCRIPTION, & WASTE MANAGEMENT

Facility Information

Mettler-Toledo Inc. (MTI) manufactures a variety of instruments and software for use in businesses such as laboratories, industrial operations, and retailers. The MTI facility located at 6600 Huntley Road, Columbus, OH, Franklin County, ID #: OHD092151380 manufactures heavy duty scales, and any associated replacement parts, for use in the commercial industry.

MTI is a small quantity generator of hazardous waste. In the past, hazardous waste codes D007, D008, F003, and F005 were given to the paint waste stream, but since a product change the D007 and D008 hazardous waste codes were no longer applicable. This change was confirmed by TCLP analysis.

Process Description & Waste Management

For the production and/or repair of industrial scales, steel is brought to the facility by trucks. The raw steel is then cut to specification by use of a laser cutting machine or press cutter. The cut steel is then formed into the needed parts. These parts may then be welded, shot blasted, cleaned, and/or painted as needed. Upon completion of the parts, they are taken to another part of the facility for assembly and/or packaged for off-site shipment.

Two (2) parts cleaners are located at the facility (machining area, maintenance area) that use Crystal Clean solvent which has been determined to be in a reuse program managed by Crystal Clean.

Shot blast machines are located throughout the facility and are connected to a bag house system. The shot blast waste has been evaluated and determined to be non-hazardous and is either recycled (steel) and/or disposed with the regular trash.

There are two (2) paint booths used at this facility. Epoxy paints are used to paint the parts. Each paint booth has an associated paint room nearby. A hazardous waste satellite container is located in each paint room. Signage on the wall directly behind the satellite containers indicates the management of hazardous waste. When filled, each container is then individually labeled and dated prior to accumulation in the <180 day accumulation area (plastic shed on north end of facility). Each paint room has a solvent distillation unit. Methyl Ethyl Ketone is used for paint equipment cleaning and is distilled for reuse. International Paint GTA-220 is used for paint thinning. Signage indicating emergency equipment locations, emergency telephone numbers, evacuation routes, etc. has been placed throughout the facility. The solvent distillation bottoms are managed as hazardous waste. Any solvent contaminated wipers,

PPE, etc. are reportedly placed in the hazardous waste satellite containers for disposal. Each paint booth has an associated curing oven, and upon completion of painting, the parts are placed into the ovens for curing. Once cured, the parts are assembled and/or readied for shipment. Hazardous wastes coded F003, F005 are generated and managed through this process. These hazardous wastes are presently shipped to Giant Resource Recovery (SCD036275626) in Sumpter, SC for management/disposal. In calendar year 2008, approximately 1,250 pounds of this hazardous waste was generated each month. In calendar year 2009 to date, approximately 450 pounds of hazardous waste per month have been generated.

MTI services their forklifts and equipment when possible. Used oils and antifreeze generated are now sent to Capital City Oil, Mt. Vernon, OH for management. Used oil filters are drained into a container and the filters are then separately containerized and sent off-site for recycling at a used oil facility. Lead acid batteries for internal combustion engine forklifts are exchanged with the battery supplier when necessary. Any large forklift batteries are exchanged with the service company when needed.

Unifirst supplies MTI with rags, but it was reported that only rags that have not been in contact with hazardous solvents are laundered with them. Any rags in contact with hazardous solvents or wastes are reportedly placed into the hazardous waste satellite containers.

Spent fluorescent light bulbs, batteries, ballasts, electronic wastes, etc. are managed as universal wastes and/or managed for recycling. These items are sent to Retrofit Recycling, Owatonna, MN or Columbus Micro Systems, Columbus, OH for recycling.

In the past, non-solvent associated absorbent wastes, antifreeze, machine coolants, used oil, paint scrapings/solid fuel (not hazardous per TCLP testing) were managed through Crystal Clean, but MTI has since changed to some different vendors for their waste management.

Violations/Comments

Two (2) containers of hazardous waste were located in the <180 day hazardous waste accumulation shed. One (1) of the containers of hazardous waste did not have the accumulation start date listed on the label.

Although personnel review the area and hazardous waste accumulation shed on an almost daily basis, no documentation of inspections for the <180 day hazardous waste accumulation area/shed have been logged and maintained.

Spent fluorescent bulbs and various batteries were being managed as universal wastes. The containers used for accumulation (cardboard containers for bulbs and plastic buckets for batteries) were not appropriately labeled or closed.
