**Re: Franklin International
Large Quantity Generat
OHD004280590
Franklin County**

Dear Mr. Cutrell:

Thank you for accompanying me during Ohio EPA's September 13, 2012, inspection of Franklin International's facility in Columbus, Ohio. We inspected Franklin to determine its compliance with Ohio's hazardous waste, universal waste and used oil laws as found in Chapter 3734 of the Ohio Revised Code (ORC) and Chapter 3745 of the Ohio Administrative Code (OAC). This letter will explain the violations we found, and what you need to do to correct the violations.

We found the following violations of Ohio's hazardous waste laws. In order to correct these violations you must do the following and send me the required information **within 14 days of your receipt of this letter.**

1. Contingency Plan OAC 3745-65-52 (C)

The contingency plan must describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and Ohio EPA and local emergency response teams to coordinate emergency services.

Franklin International needs to make arrangements with the proper authorities, to familiarize them with the facility, and submit proof to Ohio EPA that such an attempt was made and is included in the updated contingency plan.

2. Contingency Plan OAC 3745-65-52(D)

A current list of names, addresses and telephone numbers (office and home) of all persons qualified to act as emergency coordinator must be included in the plan. At the time of the inspection this list needed to be updated.

Ohio EPA has received an updated contact list and no further action is necessary.

3. Contingency Plan OAC 3745-65-53 (A)(B)

A copy of the contingency plan and all revisions to the plan shall be maintained at the facility and submitted to all local police departments, fire departments, hospitals, and Ohio EPA and local emergency response teams that may be requested to provide emergency services. Franklin International failed to show that they had submitted an updated contingency plan to any of the aforementioned agencies.

Franklin International must send an updated contingency plan to all appropriate agencies and submit to Ohio EPA a signed cover letter that acknowledges receipt or Franklin International may send them certified mail.

4. Satellite Accumulation Area OAC 3745-52-34 (C)(1)(a)

A generator may accumulate as much as 55 gallons of hazardous waste in containers at or near any point of generation where wastes initially accumulate, which is under the control of the operator of the process generating the waste, provided that the generator ensures that a container holding hazardous waste shall always be closed during storage, except when adding or removing waste. Franklin International had not closed two 55 gallon drums of hazardous waste in building 21.

Ohio EPA received documentation on September 20, 2012 that the 55 gallon drums in the satellite were properly closed no further action is necessary at this time.

5. Satellite Accumulation Area OAC 3745-52-34 (C)(1)(b)

A generator may accumulate as much as 55 gallons of hazardous waste in containers at or near any point of generation where wastes initially accumulate, which is under the control of the operator of the process generating the waste, provided that a generator marks their containers with the words "Hazardous Waste" or with other words that identify the contents of the containers. Franklin International had not appropriately labeled two 55 gallon drums of hazardous waste in building 21.

Mr. Richard Cutrell
Corporate Manager, Environmental Health & Safety
Franklin International
Page 3 of 3

Ohio EPA received documentation on September 20, 2012 that the 55 gallon drums in the satellite were properly labeled, no further action is necessary at this time.

6. Used Oil Generator Standards OAC 3745-279-22 (C)

Containers and aboveground tanks used to store used oil at generator facilities shall be labeled or marked clearly with the words "Used Oil." At the time of the inspection multiple 5 gallon buckets in the maintenance shop were not labeled with the words "Used Oil."

On September 20, 2012 Ohio EPA received documentation that the 5 gallon buckets were emptied into the facility's used oil tank, no further action is necessary at this time.

Enclosed please find copies of the checklists completed at the time of the inspection. Should you have any further questions, please feel free to contact me at (614) 728-3884.

You can find copies of the rules and other information on the division's web page at: <http://www.epa.ohio.gov/dmwm/>.

PROCESS DESCRIPTION SECTION

Give a general process description (include all processes done at the facility)

Franklin International (Franklin) is a privately owned company located at 2020 Bruck Street, Columbus, Ohio 43207. The company was started in 1935 and was known as Franklin Chemical Industries until 1985 when the name was changed. The ownership did not change. The name was changed because Franklin International was not a chemical manufacturing company but produced only glues and adhesives. Franklin manufactures glues and adhesives for all types of uses. The company operates three shifts per week, five days per week. Presently, Franklin employs 400 to 450 employees.

Franklin currently consists of four main divisions at the Columbus site. There is a Polymers Division, a Construction Division, an Industrial Division, and a Bulk Polymer Division. There are also eight laboratories located on site.

The Polymer Division manufactures pressure sensitive adhesives and basic products for the Industrial Division for use in their process. The pressure sensitive adhesive manufactured by the Polymer Division is used on pressure sensitive stamps, bumper stickers and popcorn bags, etc. The raw materials used in this area are Acrylic monomers, Surfactants, colloids, Transfer agents, Initiators (Peroxides), Rubbers and resins. This material is placed in one of the 10 batch or 1 continuous reactor to make the glues and adhesives. The hazardous wastes generated in this process are flammable liquids (D001) and acrylates (U162)

The Industrial Division manufactures wood glues used mainly in the furniture industry. The raw materials used in this area are adhesives manufactured in the Polymer Division, water, polyvinyl alcohols, fillers and starches. This material is placed in one of the 12 mixing units or in one of the 6 product or raw material storage tanks until needed. This area also has a packaging line where the glues are packaged in bottles. Polyurethane glues are also packaged here. The polyurethane glues are manufactured off-site. Hazardous waste generated here is mainly from the out of date product or off-spec product.

The Construction Division manufactures glues used in the construction industry. This division manufactures both water based and solvent based glues and adhesives. The raw materials used in the Division are water, fillers and solvents. The hazardous waste generated is trichloroethylene from cleaning of equipment and off-spec products. This is characteristic for Ignitability (D001, F002).

The Bulk Polymer Division operates under the Construction Division developing water based adhesives for the Industrial and Polymer divisions, while doing "Hot Melts" for the Construction division. No hazardous waste is generated in this area.

There are also several laboratories at the facility. Most of the waste generated in the laboratories is from solvents, QA/QC materials, rework products and testing of raw

F005). The amount of lab waste can vary greatly from year to year depending upon the amount of R & D done, last years generation was approximately 9550 pounds. Lab waste is kept in satellite accumulation areas located in the lab until full. They are then lab packed by Raider Environmental and sent to Teris for Incineration.

3. Line Clean Outs,

N-Propyl Bromide (D001) and TCE (F002) are used as cleaning agents in the tanks and lines. The amount of cleaning solvents is gradually being reduced. TCE is currently being phased out and replaced with NPB. Franklin generates approximately 4500 gallons of NPB per year and only 1000 gallons of TCE. Both of these waste are stored in 55 gallon drums in the 90 day accumulation area before being sent to sent to Chemtron for fuels blending.

4. Maintenance clean out,

Mineral Spirits (D001), and hexane (D001) are use for general maintenance operations throughout the facility. Approximately 10 gallons of this waste is generated per month. This waste is stored in 55 gallon drums in the 90 day area. This waste is sent to Chemtron for fuels blending.

5. Spill clean up,

Acrylic acid spill debris (U008) used for obviously spill clean up. This is generated on an as needed basis last year producing 1604 pounds of waste. This waste is stored in 55 gallon drums in the 90 day area and sent to Chemtron.

6. Miscellaneous Non-Haz waste

Incidental Used oil is stored in 55 gallon drums until it is picked up by Central Ohio Oil, three drums every three to four months. Florescent lamps are recycled by Chemtron.

However, if a specific treatment method is given in 3745-270-40 for the HW, no determination is required [3745-270-07(A)(1)(b)]. 2. Inspectors can check BUSTR's web-site at https://www.comapps.ohio.gov/sfm/fire_apps/bust/bustr/PublicInquiry.asp to determine if a UST containing used oil is registered with BUSTR. Inspectors may call BUSTR at 614-752-7938 or a BUSTR site coordinator to report an unregistered UST or a UST that appears to not be in compliance with BUSTR regulations. A list of BUSTR coordinators by county are at: https://www.comapps.ohio.gov/sfm/fire_apps/bust/bustr/SearchByCounty.asp.
