Dear Mr. Thompson and Mr. Mitsuka:

On November 9, 2011, I performed a compliance inspection for storm water best management practices (BMPs) at the above referenced facility located at 1106 North Main Street. I was accompanied on my inspection by Todd Surrena also of the Ohio EPA Division of Surface Water. Our records indicate that runoff from this facility is authorized under the Ohio EPA General Storm Water National Pollutant Discharge Elimination System (NPDES) Permit for Construction Activities #3GC05463*AG.

Our inspection revealed that construction appears to be complete and the site has been seeded and mulched. Vegetation is establishing and appears to have reached a 70% or greater growth density. As such, it is appropriate to remove all temporary sediment and erosion controls and to submit a Notice of Termination (NOT) to Ohio EPA. As this project did not involve the creation of impervious surfaces, no post-construction BMPs are required at this time. If this area is further developed in the future, and the development creates impervious surfaces, post-construction BMPs will be required at that time.

As required by Part IV.B.2 of the NPDES permit, please submit the NOT within 45 days of reaching final stabilization. The NOT and instructions are available on our website at www.epa.ohio.gov/dsw/storm/stormform.aspx. If this parcel is further developed in the future, a

new Notice of Intent with associated storm water pollution prevention plan will need to be submitted at least 21 days prior to the start of those construction activities.

If you have any questions, please feel free to contact me at (330) 963-1145.

Sincerely,

Dan Bogoevski
