**Re: Concrete Ready Mix of Ohio / Franklin County
Notice of Violation
Industrial Storm Water Permit 4GR00303*DG**

Dear Mr. Dragna:

This letter is written regarding a storm water inspection I conducted on September 11, 2012, at Central Ready Mix of Ohio, located at 4252 Truro Station Road in Columbus, Ohio. I understand this facility is **not currently** covered under our Industrial General Storm Water Permit. Please consider this a formal notice of violation. The following items were noted during the inspection, also please see attached pictures:

I noted excessive sediment discharging to the pavement from your operation. The sediment was also discharging to several storm water drains and being tracked off-site from vehicle traffic. It is recommended to remove the existing sediment from the pavement. Please install erosion controls to prevent additional sediment from discharging to storm water drains or to areas where it could be tracked off-site.

You must immediately submit a renewal application for your industrial general storm water permit. Your current permit expired in 2011.

I noted that your washout pit located on the northwestern portion of this site did not fully contain the wash water during high flows. There was evidence of flows discharging beyond the pit area. Corrective measures must be implemented to increase the storage capacity of these wash out pit and to fully contain the volume.

There were empty drums stored on their side outside near the concrete wash out pit. Empty drums or containers should be stored with lids and upright.

There was a nearly full drum stored outside up slope of a storm water drain. Please store full and partially full drums in secondary containment, preferably under roof.

Please revise your storm water pollution prevention plan to address the issues above. I will inspect your facility in thirty days from the date of this letter to insure these issues have been addressed.

Todd Dragna
