**Re: Autumn Grove / Franklin County
Construction Storm Water Permit 4GC01513*AG**

Dear Mr. Conie:

This letter is written in follow-up to a construction storm water inspection that I conducted on November 21, 2012, at Autumn Grove, located near Rensch and Demorest Roads, in Franklin County. The purpose of the inspection was to evaluate compliance with the General Storm Water Permit Associated with Construction Activities. During the inspection, I noted the following (see attached pictures also):

Sediment Controls and Maintenance:

There were approximately six active lots. Most of the lots did not have erosion controls. Please install erosion controls such as silt fencing or straw wattles around the barren areas. Sediment was discharging on to the street from most lots.

Please be aware that the General Permit states that all barren areas including soil stockpiles which remain idle in excess of 21 days must be protected from erosion within 7 days of the last earth disturbing activities. In addition, erosion protection must be implemented for all areas of final grade within 7 days. Given the time of year, an alternate erosion control measures such as erosion control matting, crimped mulching, mulch with netting and/or tackifier, or an approvable alternative may need to be implemented for this site to ensure effective erosion control for the upcoming winter months.

Please maintain erosion controls, such as the silt fencing and straw wattles. The general permit states that all sediment controls will be inspected and maintained every seven days or within 24 hours of a precipitation event equal to or greater than 0.5 inches. A log of inspection must be maintained on site for the agency to review.

Please install and maintain a concrete wash-out pit for the site.
