Exceedences of stone fines content – EU F003

Dear Mr. Samec:

We are in receipt of your letter dated December 12, 2008. It is our understanding that there were considerable problems with the delivery of the letter to the Cleveland Bulk Terminal (CBT) and we apologize for that. Current contact information will be provided below in this letter, as well as copies of prior notifications.

We received the NOV through Polyscience Engineering, a consulting firm that has performed work for CBT, in mid-January and have not had the opportunity to respond until now, due to the high volume of deviation reports that were due in January. We apologize for the delay.

With respect to the silt content of the received limestone, we offer the following corrective action plan.

- CBT has filed amended quarterly deviation reports with CDAQ, to reflect the deviation of the 2% silt content, as noted in paragraph II.B.3 of EU F003.
- CBT will complete a PTIO application for EU F003, to modify the silt content of the limestone to 20%, by Friday, February 27, 2009.
- CBT will take into account any load or loads of limestone that were received at higher than 2% silt in 2008, when completing the FERS, for purposes of quantifying fugitive emissions from the site.

With respect to address and delivery issues, CBT will, by way of this letter and through a facility profile change within Air Services, provide multiple means of contacting the proper company personnel.

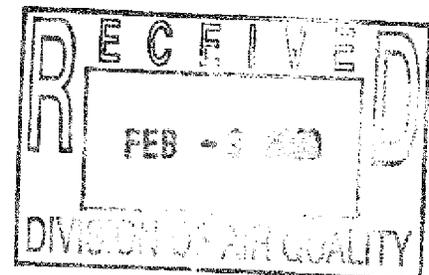

Effective immediately, all correspondence should be addressed to:
